The Inyo Acquister says: Keeler is becoming a large shipping point for ore. There is an average of 80 tons a week shipped, Thomas Holand sending out 75 tons of the whole amount. The ore production of Southern Inyo is increasing dealy, and the outlook promises a still larger output in the near inture.

Mining Burean Museum nave occupantion of the first the secretary is engaged in recrowded that the various geological and miner along the second of the first special additions which are arriving every day. Тив Миниче Викели.—Тhe cases at the

stars are distant from each other, win unuay you to the pole star. Jience these two stars are called the "Pointers."
Astronomers have agreed to use Greek letters to designate the different stars in each constellation. Thus, in the above disgram, Dubhe is lation. Thus, in the above disgram, Dubhe is (alpha) and of Urea Major. Benetinsachi sy (eta) of Urea Major. Benetinsachi sy (eta) of ient to have the whole Greek alphabet to refer to, although we shall rarely have occasion to use more than the first six or eight letters.

Mizar is a double star; its companion is named Alcor. This double can be seen with a glass of very low power; some persons can see it with the naked eye. It should be noticed that a line drawn from Merak through Dubhe, and carried about five times as far as those two stars are distant from each other, will bring you to the pole star. Hence those two stars are

cating the other constellations in these regions of loading the other constellations in these regions of space.

At 9 o'clock in the evening, in the month of July, the constellations of the Dipper (Ures Major) and Cassiopeis, with the pole star nearly as in the diagram. And at all hours of the ain the diagram. And at all hours of the ain the diagram. And at all hours of the spar, these ears as in the diagram. And at all hours of the year, these ears night, and all seasons of the year, these ears appear around the pole star—as the summer of the pear to move around the pole star—as the sum supposes to move around the pole star—as the sum pole, etc. (If you copy the diagram on a small pole, etc. (If you copy the diagram on a small by piece of stiff spaper, and stiff in which the head star, you can trun the paper, and stiff in which the heads of a clock move, and et all the various positions.) These, and some others that lie around the pole of the circumpolar constellations the parties of a clock move, and et all the various positions. As the ers and some others that lie around the pole of the observing the pole of the contempolar onstellations the parties the incommendations. As the tring latitude, or in most parte of the oriental consellations the parties of the serior of objects or objects or in most partes of the circumpolar onstellations the partes of the observing the paper. Ures Major. The seven most noticeable stars in this group—those which form the Dipper—have names, and very peculiar form the Dipper—have names, and very peculiar form the Dipper—have names, and very peculiar ones, which can be learned from diagram Mo. S.

Now, if you look at the Dipper in its entirety, and then cast your eye across the northern heaves, taking in line the pole star, you will notice another constellation or group of stares as about the same distance from the pole star as Drea Major, in form somewhat like a capital This constellation is named Casanopeis. I This constellation is named the pole star. This constellation is named the with these constellations; you will find it a great the pole of the Worth. The poly the misphere, affording you the Morth ern Hemisphere, affording you the means of losting the other constellations in these regions cating the other constellations in the means of losting space.

nounced it a diamond of remarkably fine quality

The first diamond is said to have been found in 1867 by some Datch children as farm near. Hope Town, 90 miles south of Kimberley. It passed into the hands of a Datch farmer named Van Miekerk, who gave it to a noted hunter named O'Beilly to take to the coast to sacerain what it was. After considerable trouble an Amsterdam merohant was consulted and pronounced it a diamond of remarkably disconsility.

A FLAT MAGNITURE LEAS.—A scientific novelty is a lens which magnifies, yet is pertectly flat on both sides. It is made at Jens by the manufacture of Prof. Abbe's new optical glass. The Jens consists of a single disk whose density varies so that its refractive power decreases regularly from the surface inward,

HIME PLATITUM WIRE.—It has been demonstrated that platinum wire may be drawn so that blatining wire may be drawn to be invisible to the naked eye, all cough its presence upon a perfectly white card can be detected by the touch, and can be seen by the said of a small magnifying glass when the card is held in such a position that the wire casts a hadow.

SIMPLE TEST FOR GOLD.—Take a piece of dint and rub against it the metallic object to the tacked, until the latter leaves a sufficiently marked trace upon the stone. Upon bringing the spot, the latter will remain intact if it has been made with gold, but will disappear if the contrary be the case.

Wucanized India-Rubber.—According to quently observed in stricts made of vulcanized quently observed in stricts made of vulcanized quently observed in stricts made of vulcanized undia-rubber; is due to the slow formation of almospheric acid by the section of the archole when the prevented washing be prevented by occasional prolonged washing dered slightly alkaline (Jour. Pharm., April 15, p. 417). In this way he has been able to maintain drainage tubes in a supple condition maintain drainage tubes in a supple condition in a sound of the archiver.

Heerrivo Mixture. A liquid invented by Legering of Geneva, Switzerland, for use as a disinfectant, of Geneva, Switzerland, for use as a disinfectant, answers well as a freezing mixture for hardening microscope specimens. Sulphur dioxide and carbon dioxide, having bean mixed and cooled and compressed until liberated, they are liquid, are stored in siphons. When they are liquid, are stored in siphons. When liberated, they rapidly evaporate with great recury may be frozen and animal or vegetable cury may be frozen and animal or vegetable as easily managed and more effective than ether, the odor being the principal objection.

A New Decimal System,—There is a decinal on the following principle: The day has ten on the following principle: The day has ten on the following principle: The day has ten on the following principle: The aconds and each minutes, each minute ten seconds and each second ten rays—thus dividing the whole day people of the circle. Herr Moder of that applied to the circle. Herr more to that the year into ten more of 35, the uneven ones of 37 days each. The advances of this decimal system are placed in yaddence, and the inventor hopes to see the game adopted before long, in spite of the presence of the circle o

mingham as pania de Caraguez.

Tuning an aper asya that a novel experiment mingham apper asya that a novel experiment was recently kried there with the telephone. A letter was received by Messrs. Rogers & Priestly, musical exterers in that town, asking the arms to send an organ to suit a planoforte to a room at Moseley, where a concert was totally at a place that night. The firm was totally at a less to know the precise tone of the piane, and place that night. The firm was totally at a less to know the precise tone of the much to their subject outly despaired of being able to comply with the demand in time. However, much to their subject outly despaired of being able to comply with the demand in time. However, much to their subject of the nonitate with the people at Messrs, Rogers & Priestly asked that one of the notes of the pian should be struck. When this was done, the sound could be struck. When this was done, the sound could be distinctly heard in Colmore Row, and by gradually reducing the pitch pipe the tones of both instruments were made to correspond.

SILVER IN THE VOLCANIC ASH REGRIF, GORDE, REGRIF, TROUR OF COTOPEANT IN 1885.—J. W. Mailal and yood the sate collected at labits de Carazurov of Cotopeant in 1885.—J. W. Mailal field to the depth of several inches. The specimen was a light brownish-grey, very finely divided, mobile powder, soft to the short from of such the self of the microscope. When strongly pasted, it turned dark iron or were distinguished by aid of the microscope. When strongly pasted is destricted by a strongly pasted by a strongly pasted as the microscope. When strongly leads to a nearly black slag. Single, may be self self the self, or short two-diths of sirver was present to the each, or shout two-diths of alver in the phout one strongly near the self or short of the self, or shout two-diths of alver elected during the strongly near the self of sirver elected during the cruption, in view of the vast masses of volcanic eruption, in view of the vast masses of volcanic eruption, in view of the vast masses of volcanic eruption, in view of the vast masses of volcanic and as as indicated by the fall at so distant a point as Bahia de Caraguez."

greater than the quantity of nitrogen existing as ammonis or nitrogen oxides in the air or rain. In fact, the rain removes from the soil in the form of soluble nitrates considerably more nitrogen than it brings in the form of ammonis. At the same time, the amount of nitrogen abute the rain the case of soil exposed to rain than where soil is protected, probably to wing to the greater activity possessed by the nitrogen-absorbing organisms under the former conditions. In the majority of cases, a notable converted in the nitrogen is converted proportion of the absorbed nitrogen is converted into nitrates.—Berthelot, Compt. Rend.

Our coast. We have seen and carefully followed the experiments conducted by Prof. Oscaperior. At a word he impresses the subject with the sides that he has lost the seeing ject with the sides that he has lost the feeling to he lost a seathesis. The hand may be hurned lost areasthesis. The hand may be hurned by Dr. Pearce, before a large audience, mainly by Dr. Pearce, before a large audience, mainly composed of doctors, the subject smilling; the composed of doctors, the subject smilling; the doctors conversed in the state the muscles became relaxed and prolonged it better, the muscles became relaxed and prolonged it better, the muscles became relaxed and prolonged it becomes the 'magnetic sleep,' the most urigoralists, the magnetic sleep,' we have scores of the state the muscles became relaxed and prolonged it becomes the 'magnetic sleep,' the most urigoralists, worn and the releasing tree in the structure, as the somes the 'magnetic sleep,' the most urigoralists and dever-tossed heads will in the letter, worn and fever-tossed heads will in the lumper, the want of which too often ends in standing the state of the subject in the structure, and the subject in th

mentioned giants exoceding IO and even 12 feet in hight, but these accounts have doubtless from tioned whether and it may well be questioned whether any of these individuals have there exceeded in stature the giant Winckelmelt, who is now exhibiting in firance, and who is awb is now exhibiting in firance, and who is a feet high. Dwarfs of 16 and even IZ inches are said to have existed, but these diminutive foreburds have been either immature or ill formed. A noteworthy instance of a very forestures have been either immature or ill formed. A noteworthy instance of a very enable and died in 1871, and never was born in 1789, enable of the celt of eveloped dwarf is the celt in pight. These two examples are selected by La Nuture of Paris as an illustration of the extremes between which human stature extremes between which human stature ranges.

The Texpor.—All women who are in the bath of the path of the path of the careless the cap of teas are warned against the careless habit of leaving any each of the careless habit of leaving any each of the care odd at an hour much later than or to be taken could at an hour much later that has been long standing contains does a great has been long standing contains does a great has been long standing contains does a great made with freshly boiled water is not hurtful made with freshly boiled water is not hurtful taken once or twice a day, but strong tea, or teach of made or twice a day, but strong tea, or the contains and the contains the contains and the contains and the contains a con

TOR RHEUMANTEM.—Dr. Vulpian states that salicylates thinking anicylate of lithis is more efficacious than subjected of sods in cases of soute and progressive subsoute articular rheumatism. It also has subsoute articular rheumatism. It also has some effect in chronic cases when a certain number of the joints are still deformed, swollen and pentiul. Salicylate of lithia may be given and pantiul. Salicylate of lithia may be given dissolved in water, in powder, or in unleavened bread, during or after meals, in doses of 50 centigrams. The physiological effects of the drugs are headache, giddiness and desiness.—
British Medical Record.

GALVANISM FOR THE ASPHYXIATED.—Dr. Brown-Sequerd, the celebrated physiologisk, says that he has discovered that the moment appears, and that the best means of resuccishing persons apply galvanism to onlyga or water, is to apply galvanism to the skin of the neck, a method he has accessfully employed.

is then dried, and subsequently pulverized. In its pulverized state it is introduced into a mold of the requisite construction to produce the desired article, type or block, and then subjected to presente to consolidate it and heat to render to presente to consolidate it and material. Finally the type is cooled while in the mold, so the art of the mold, so as to cause it to retain its shape and solidity.

EDIBLE SEALUS.—New Orleans is the largest of seases of causes it to reteam its the largest onesumer of smalls in this country. They are consumer of smalls in this country. They are onesumer of smalls into hot water, says a Southern epige out, and killed. Then they are weak solution of lye, which removes the slime, week solution of lye, which removes the slime, and the shells are cleaned with stronger lye, and the shells are cleaned with atronger lye, and the shells with a dressing of bread and pareley, and thus propared the smalls are lowed from the district the one water are removed from the district one must the district are removed from the district one must be one the small such the small such the small such the small such the shell may be put to the mouth a fork, or the shell may be put to the mouth and the small sucked out bodily.

CEMENT FOR DELICATE WORK.—For delicate or the same of th

OEMENT FOR DELICATE WORK.—For delicate work, such as emecing silks for lans, etc., the work, such as emecing silks for lans, etc., the such as emecing conent is much used by the Japanese: Take best finely ground rice-flour, nix with a little cold water, and then pour transfer to a clean enameled; saucepan, and boil transfer to a clean enameled; saucepan, and boil transfer to a clean enameled; saucepan, and superior to the cements generally used, and when well made is slmost transparent.

Better Than Babeltt Metal.—The Electric acts the confidence of Review gives the following as a lining metal superior to "babbitt"; Melt in a crucible one and a half gounds of copper, and while this is melting get a big lidle and melt 25 pounds of the and three of autimony; heat it red-hot and pour the two together and stir till thoroughly pour the two together and stir till thoroughly mixed.

SHOOTING IN THE DARK.—The difficulty of sighting rides in the dark has been ingeniously overcome by the use of luminous paint. The war-office authorities have had some of these sights under trial for the past six months, and sights under trial for the past six months, and pare the past six months.

PLASTER BUSTS and statuettes may be cleaned by dipping them into thick liquid cold scarch— that is, clear starch mixed with cold water— then drying them, and when the starch is brushed off the dirt comes off with it.

Glass for Sandparer.—Glass, polverised by plunging when red-hot into cold water, and then finishing in morters, is largely taking the place of sand in making sandpaper.

## GOOD MEALTH,

### Hypnotism.

Some attention has of late been called by the American press to the marvelous results attained by Trof. Charcots and other french exterine attained by Trof. Charcots and other french experimenters in this branch of psychio etudy, better known as mesmerism. Physiolans in England and terminary are likewise using this power in the treatment of some forms of mental power in the treatment of some forms of mental power in the treatment of some forms of mental hard and are treatment of some forms of mental hard and recommended for them, the ondition known has let a certain bor locality, andmiss fearlessly to the most severe operation, thereby escaping the risk too often attending the use of assableding the most limbs the study of mental science, or psychologen action of mind is worthy of close attention. The bypnotic state is best likened to the course action of mind is worthy of close attention. The bypnotic state is best likened to the four and its actions of any other, just as in sleep. Applied in the person performs of mind is mind becomes possessed of one idea, to the total exclusion of any other, just as in sleep. Applied in the person performs of one idea, to the total exclusion of any other, some and in the same would be were the person wide stan science we see around us, every day, and is a less degree we see around us, every day, in a large action of any less around us, every day, in the same would be were the person wide and it as less degrees we see around us, every day, in the same would be were see around us, every day,

all will pay without any assorting.

SCORPION,—The east drift on the 300 level is in vein material that carries a good deal of quarts. Although metal-bearing, this quarts is of a low grade.

YELLOW JACKET.—Are extracting and sending to has been opened up ready for extraction.

JUSTICE.—About 500 tons of ore have accumulation of the dump, and the ore-producing sections are looking well.

HAWOOD.—The Thompson mill is regularly engreed and is and is the section of the dump.

LADY WASHINGTON.—The north drift on the 785 level is still in good milling ove. The ove body promises to be several sers of timbers in width, and all will pay without any assorting.

CHOLLAR,—The retimbering of the incline down to the raco level is making fair progress. The west faift from the Chollar old shaft to connect with the Sharon shaft is in quartz showing some stringers of ore.

ANDES.—The drift north from the winze below the s4o level is cutting some very good streaks and bunches of ore. The west crosscut on this level is in vein porphyry earlying some promising feeders of quarts.

#### Washoe District. MEVADA.

ore is much richer than the ore in the main tunnel or the ledge, and is very rich. There is an immense body of ore in sight. On the schange there is also an open cut of about or or the schange there is also an open cut of about or or so feet long and is being the schoult or or ras feet long in gold ore. This mice is owned by Messrs. Smith & Grover. There is an abundance of wood and water on and in the, vicinity of the claim too it has one that you were ynth free willing gold ore. This mice is owned by Messrs, and in the vicinity of the claim for it is exceedingly rich. I maght mention, for instance, but have tested some of the ore from them and find the Kalmpton & Wason; the Brown and find son & Owen; the Lady Belle and Ruby, owned by Messrs. Babb & Mennse; the Cashonale fore are the Mammoth, owned by Messrs. Atchibald, Ralmon & Wason; the Brown mine; the Mammoth, owned by Messrs. Babb & Mennse; the Casique, owned by Messrs. A GLOVE.—There is probably no line of goods that requires more care in manufacturing than gloves. The is owning to the large number of pieces which must be accurately adjusted in order to make which must be accurately adjusted in order to make too of the Leak Glove. A visit to and an inspection of the Leak Glove Manufacturing Co.'s seasblishment is all that is necessary to convince one that it hey are fixed to do just what they profess to be doing—making the best gloves in the world.

THE Homestake paid its one hundred and seventh dividend on the 25th. The amount was \$25 000, making \$150,000 this year, and \$3,848,450 to date.

We quote shipments since our last, and shall be labeased to receive further reports:

AVANING WACHINE CONCENTRATOR OBE THE FRUE

FIVE HUNDRED AND FIFTY DOLLARS

(00'0995)

The present improved form of the celebrated "Triumth" Ore Concentrator possesses many advantages over any other style of Vanners, Vanning Machines, or Concentrators, yet introduced to the notice of mining men. These advantages consist in the superior features which enter into their construction, and facilitate their operation.

They are constructed in the contract manner; their trames being of iron, insures their solidity, durability, and perfect steadiness of motion when operated. They are built as compactly as their requisite strength will permit, weigh less, readiness of motion when operated. They are built as compactly as their requisite strength will permit, weigh less, replaced in front of and which their cost of transportation is reduced, and occupy less mill room whose set up, have the strength which their cost of transportation is reduced, and occupy less mill room whom the stees the discharge from the feed and amalgam bow! The improvement is in the replie is at cast motion which are strength as recently been introduced into their construction, which cannot be seen introduced into the states the statement is in the recipion of the discharge trom the feed and amalgam bow! The improvement is at the recipion of the discharge trom the discharge trength which takes the discharge to by the longitudinal unction of the staking frame to which the takes the statement in the statement of the efficiency and superintenants of mines in different mining districts of the Ontering such letters of testimony, and, as well, directions for setting up and operating these of sea decreased to send Circulars covering such letters of settimony, and, as well, directions for setting up and operating these pleases and set ready to quote special prices for any considerable order.

sures. Large vs. Small Boilers — High Pres-

The Use and Importance of a Proper The Obserod Importance of a Proport Water Chroulstion.

The economy of a boiler depends upon three things—the setting, the conductivity of the plates and the circulation. A poor circulation in a boiler is as equally detrimental to the confactal to the confactal to the feet that a poor circulation of the steam generated as a poor circulation of the blood in the human yastem confacton of the bood in the fact that a poor circulation of the steam confacton in a boiler a poor circulation in a pool of the feet and feet, hence they abould not a poor circulation in a boiler in the bold of circulation in the steam through the plates and convert it into steam produce equally detrimental results? It is through the plates and convert it into steam and it is another question for the heated water to ruse to the plates and convert it into steam and descend again to the bottom. There are cases where, in order to obtain a large capacity from amall boilers, circulation pumps are used asses where, in order to obtain a large capacity from an an active oirculation. The force aside the water in order to obtain a large capacity of the surface in order to obtain a large capacity from an an active oirculation. The force of the circulation is not very great, as it is morely brought about by the relative densities meetly brought about by the relative densities of the surface, and, upon discharging its steam, descended to be again reheated, hence we see that, as the currents are accelerated only by their difference in density, they are assily related.

The Government of the surface of a Bolter difference in density, they are assily related.

LATEGO VS, SIMSHI BOILOTS — HIRRI F168BUIGS.

In an instructive article on the above subject, the Locomotive recently remarked:

Valurally the first difficulty encountered in the construction of the boiler. It steam in the construction of the boiler, it steam in the construction of the boiler. It steam in the construction of the boiler. It steam in the construction of the boiler is the test in the sent of the boiler shall be sent the very special states built to earry the bigh pressure its factor of the boiler shall be sent the very the beat sent of the boiler shall be sent the very the beat sent the very the beat sent the very the beat sent the very the sent the very the sent the very the sent that the difficulty want the very the sent that the difficulty is sent the very the sent that the difficulty of the very the sent that the difficulty is sent the very the sent that the difficulty is sent that the difficulty of properly; there are sent on the very the sent that the difficulty is sent in the very of pressure that sent the sent to the very power developed, it is cheeper in first one; to the sit, a slightly greater degree of economy treet, sent be selved to boiler. The four small boilers or requires less space, less briefly carried.

For example, suppose 100-horse power is wanted, the same power, would required a sent boiler, the sent same properly.

For example, suppose 100-horse power is wanted, the two onld requires the suppose 100-horse power is wanted, we can get it by using greater degree of economy places this would one the same power, would required in the first case, and in many places this would one as a same parting it is died, be same power, would required in the first sate, and in many places this would one the same sent of the same of the large boiler, furnishing the same power, would required in the last three sines of the large select in the same of the large of the same select with the two case, and in many places the would could be required in the same three such marked, such same same an

THE METURE.—Butte Mirer, June 30: The cool-foot level of the Nepture that was footded not be gained and eveloped of the Nepture that was footded not long since is now entirely drained, and developed of the corful drift referred by been continued. On the corful drift referred to the continuation of the good of the foot of the corful drained of the foot of the cool is the too the state. The chuick, and the lowest assist is remarkably fide. On the rap-foot level there is of that level and the work of development of that level cool fide that the second the work of development of that level cool fide that the station of that level beging the saction at Meaderville has been cut, and drifts run both east and west. Stepen cut, and drifts run both east and west. Stepen cut, and drifts run both east and west. Stepen cut, and drifts run both east and west. Stepen cut, and drifts run hout as and west. Stepen cut, and drifts run both east and west. Stepen cut, and drifts run hout east and west. Stepen cut, and drifts run hout on that cate only certained, though they are not in far enough to destremate, though they are not in far enough to destremate, though they are not in far enough to destremate, though they are not in far enough to destremate in lead matter that looks lavorable. The continues in lead matter that looks lavorable. The dount of manual drifts in the leader of the Anaconda were busy all day letting down turbers.

WE COL CAMP.—Arizona Enterprise, July 2: D.

W. Cummings says the ore body on Chillson & Hinds' claim is remarkable for its extent and richness: It is thought probable that arrangements will be made to have too tons of ore worked at the Vekol mill, after awhile, which will net a sum sulfocted to erect awhile, which will net a sum sulfocted for made to developments also shows a future of phonomental propability. The mine belonging to Supt. Day, adpoining the claim of Messrs. Chillson & Hinds, pioning the claim of Messrs. Chillson & Hinds, also shows exceedingly high-grade ore in flattering the original produce half a dozen more mines like the famous Vekol.

Vekol.

AT HAMILTON.—White Pine Meas, July 2: The finest The paying mining property in our midst, for the labor being performed at present, is that of Austin Jacobson and his partner, Gue Simonson, who are acadily making more than wages, besides improve ing their property. They have got a first-class ling and know it. The Stafford mine shows no material change, but is reported as looking well.

feet.

Union Districts.

PROGRESSING.—Belmont Coursies, July 2: Work is progressing finely in the various raines in Union Districts.

PROGRESSING.—Belmont Coursies, July 2: Work is progressing finely in the various raines in Union district. Messre, Stewart & Phoneny of Obio Dave sent enough money to pay off all debts due by the Knickerbocker Company, and the Knickerbocker Company, and the Knickerbocker Company, and Storm Kring mines. Give town the Berlin and Storm Kring mines, sand he feels confident that these mines will step or into not error the Berlin, Storm Kring and other mines, and the owners are shipping silver bull-town the Berlin, Storm Kring and other mines, and the owners are shipping silver bull-town the Berlin, Storm Kring and other mines, and the owners are shipping silver bull-town the Berlin, Storm Kring and the owners are shipping silver bull-town tegularly.

An Marke Place Pine Districts.

MORTH BELLE ISLE.—The sinking of the shaft and cutting out of the station on the 400-foot level and cutting out of the station on the 400-foot level will be pushed forward as rapidly as possible. A portion of the machinery has arrived and good progress will be made in erecting the new works.

NAVAJO.—Everything in and about the pump station has been completed, and the pumps do the work easily in ten hours. Work underground will have to be suspended for about ten days, while the shaft is being teinhered from the surface down yo feet.

Unlon Dietrict.

Intow or water.

DiANA,—Crosseut west soo-foot level has made good progress.

Drift north from east crosseut, same vein, which looks tavorable, and the over has continued to improve in quantity and quality.

MEVADA QUEEN, —The shaft-house has been completed and shaft finished to the 352-foot level. All the holsting is now being done through the main abnaft.

silver.

GRAND PRIZE.—Resumed work in face of south crosscut from west 300 north lateral drift. Face is no hard porphyry, showing small seams of quarts.

COMMINGWIERLITH.—Northwest grangway, 300-foot level, has been extended at feet, exposing some very flow of water.

The north of the east side, from which there is quite a flow of water.

nines, Photoh District.

THE GUMN GROUP.—Wood River Times, July 3: Since recuming work in the lower tunnel of the Jumbo, a length of 15 feet has been added to the duffit. The vein shows fully seven feet in width-of which from 6 to 14 inches assay from 5too to of which from 6 to 14 inches assay from 5too to of the tunnel, but not settled selecting the rich stream instes, and an average taken clear across the breast in the remaining six feet of the ledge gold predominates, and an average taken clear across the breast of the tunnel (but not including the trich stream ing steadily, putting through to to 15 tons per day; but no general cleanup having been made, results and to be stated.

GENEVA,—A shaft has been sunk on this mine 60 feet, and the ore ledge is four feet in width. Assays have been made from time to time which run about its owners. Murkensohen & bralley are its owners.

DALY PLACER CLAIM.—The placer claim of the Daly Bros, is now being worked steadily. They are laking out about \$15 per day to the man. They have four men at work and expect to do better as soon as their new dirch is completed which will give them plenty of water.

LADY VINCENT.—This mine is the property of the present they have a torce of four men as work and a property of the present they have a torce of four men the property of the present they have a torce of four men they bave accommodations for them.

MENTONE.—Buttle Mirrer, June 301. The first ball of the present year cylinders and developed to the countried of the present of the present were the countried or the countried or the countried of the present more and the countried or the countr NEW MEXICO.

SILVER CREEK.—Bedrock Demand, June 37; Speaking of the Silver Creek district, Mr. T. R., Bentley said: Tail, Kidgeway & Skelton bave a lesse on tunnel No. 3, of the California, and are taking out a most excellent quality of high-grade wide, ten inches to a foot of which works \$200 per 100. On the lowntranspace to a foot of which works \$200 per 100. On the lower tunnel, Mr. C. Probasco and A. H. Hennington, owners of the Hennington, owners of the Silver King, on Craeker creek, and a saeking, preparatory to short in mell No. 2; the average in grade than that tound in tunnel No. 2; the average selecting, preparatory to the henning that the selecting preparatory of carbon capital selecting that the selecting of the Silver King, on Craeker creek, and the Silver King, on Craeker creek and will ship all summer. The average of the Silver King, on Craeker creek, and will ship all summer. The average of the Silver King, on the Silver Creek, and will ship all summer. The average of the Silver Creek, Clear Creek, so over 51s in gold and sulphruser. This average in the Interpretation of the John Day raver. It is on the creek is over 51s in the Craeker of the Silver Creek. Clear creek about 16 miles roan the California, Creek, and on the Silver Creek. Baker Co, and 42 miles from Baker Thy Grahem of the Silver Creek. Baker Co, and 42 miles from Baker the Gold-derind work 51c9 of the John Day raver. It is on the creek baker and seed by Cleaver, Tabor & Co, are the lucky owners of the Amazon, Vulvon and Bisine. On the constitution of an and bisine. On the standard seeker, Creek Amazon, Vulvon and Bisine. On the sail located on one bill. A road is now being the to creak the creek. Cre The same prities above who are interviews and many weeks are prities above who are interversed in the El Dorado, also own the Mora, and it is also a gold claim. They have a shaft down 25 feet and a 2%-foot ledge of gold-bearing took.

THE OCOREKA of Silver Hill was worked last year and condeteable good paying one was taken out. It has just been teased by a Butte company, who will proceed to develop it at once.

PYKENEES.—This company is putting on a larger town out, it has just been to easies to enter on the ore from their mine which continues to give on the orest from their mine which continues to give on the core from their mine which continues to give one assistation, and that has been sunk on this casays sport ledge which claim foo feet. The to the one is always and the continues to give assays so in gold to the ton. Messrs, Sternan & El Dokado.—A shaft has been sunk on this flow one is silver and assays about 75 ounces.

REBATE.—This wife and assays about 75 ounces.

REBATE.—The ore is silver and assays about 75 ounces.

It is owneed by Chas, Pryor and Mr. Miller.

With a full lone.

NOTHERN CROSS. - This mine is quite well known this district as a good property. Forty tons of was recently taken out and was recently taken out and was recently taken out. The average was \$13 per to the same of the same o

well under way.

SLEVER REEE.—This property, which came so nearly being sold to Salt Lake parties last year for body of ore has been struck which is claimed by about of the frame ever. A new body of ore has been struck which is claimed by sme expert to be the true facure vein, and he stakes that the stakes that the should be successful to be the true facure win, and he stakes that this last surke makes it the most valuable property about the lakes. The boys expect to commence the lake will permit.

ONTARIO.—The Ontario is a comparatively new formit in the stakes high in silver and earlies considerable obestion, but it as one the ledge. The vein is unusually promisionally permit.

Eddo.

DALARY PLACER CLAIM.—The placer claim of the Like will permit the lake with the lake that the late of the late of

but no general cleanup having been made, results and the machine of the machine of the machine of the machine of the machiner but as a short distance, will be worked this summer by a short distance, will be worked this summer by a short distance, will be worked this summer by a short distance, will be worked this summer by a short distance, will be company. All the machinery necessary back, and the work of the state o

MOHAVE COUNTY.—Miney, July 2: The American Pileg bays had 65 sacks of one worked lear week, weighing 4795 pounds. The ore sampled 543 ounces in silver, with to per cent sine, and neuted them a filtle over 5 tooo. This is the result of four men's work for so days. The sampling works have had work for one properly in this week, all they can do to work the ore brought in this week, all they can do to work the ore brought in this week, and may have to work the ore brought in this week, so may have to work the ore brought in this week, and may have to work the ore brought in this week, so we have the control of the Cupel mine bad a carload a carload and the control of the cupel mine bad as carload and the control of the cupel mine bad as carload and an earload an earload an earload and an earload an earload an earload and an

Surveyor General Hammond has received from Washington the following list of patents, for mining claims in the Syste of California, issued during the month of May:

Washington Mining District—Eagle Bird, Cornucopia, Free Trade, Secret Treasure, Celia, quark mines.

usrtz mines.
Bath Mining District—New York, Rosedale, sbastopol, placer mines.
Bready Mining District—Nip and Tuck placer

Creenwood—Muntz quartz mine. Greenwo—Argonaut quartz mine. Glencoe—Mexican, Sierra King, quartz mines. Michigan Bar—Muddox Clay Bank placer

Mevada—Cleveland placer mine.

Mevada—Cleveland placer mine.

Erenoù Gulch—Centenniel gold quartz mine,
Brown gold quartz mine,
Dewell Hill—Wilkinson placer mine.

Pilot Hill—Wilkinson placer mine.
Georgetown—Anderson placer mine.
Garden Valley—Happy Flat placer mine.
Anburn—West Extencion Call Pasture quartz
mine, Whip-poor-will, Gibraltar, placer mines.
Quartz Mountain—Quartz Mountain, Esche,
Brundal Mapole mines.

Ghodzko, placer mines.

The mine. The mine. The line marks mine and wiles. The line mark mine and millsite. The sea Spring—Porrester placer mine. Take Brown's Valley—Darebroge quarts mine.

#### Mining Share Market.

Mining Share Markelt.

During the latter part of the week an improvement was shown in the proces of mining shares, owing to the disactions free in the Gould and Curry, yet all stocks base, kept up remarked well. For the usual channels of speculative thought, yet all stocks base, kept up remarked well. For the usual channels of speculative thought, yet all stocks base, kept up remarked well. For the same reason operations on the Cometock in several leading mines have been greatly disturbed.

The regular monthly financial statements of the mines are as follows:

The regular monthly financial statements of the mines are as follows:

Alpha base \$\$8666.85 season on family. As \$\$45.90.

The regular monthly financial statements of the sail financial statements of the set in the series of the set of

#### Notices of Recent Patents.

Among the patents recently obtained through Dewey & Co.'s Scientrific Press U. S. and Foreign Patent Agency, the following are worthy of special mention:

E3—E. Q. Deming, S. F. i. Mo. 365,170. beded
June 21, ISS7. This attachment to weighing seales consists of a device by means of which the scale-beam from the stop of latch holding the scale-beam from vibrating may be disengaged without the use of the tended in the state had be disengaged without the use of scale-beam is prevented from vibration or oscil-scale is prevented the my provided above its outer end, and this is quality provided with a short lever upon one side by which the operator of scale. This, however, is troublesome in many cases where the load has been placed upon the scale, "This, however, is troublesome in many scale, "This, however, is troublesome in many scale, and this invention is designed to obok and pencil in head for the purpose of tailying the pencil in head for the purpose of tailying the pencil in head this invention is designed to obvirate this difficulty. DEVICE FOR DISEMBACHUG SCALE BEAM LATCH-ES — E. O. Deming, S. F. No. 365, 170. Dated

co. No. 365.521., Dated Junes 28, 1887. This movestion relates to a new and useful sorten interpreted relates to a new and useful sorten interpreted relates to a new and useful sorten interpreted of the interpreted of the source of ditch and have ing for its object the establing and discharge of a sold debrie, and as Jesvee, etc., which come all debrie, and as Jesvee, etc., which come or ditch, end from passing or ditch, and preventing them from passing as earlied to the sank. The invention consists in a sections of the flume or ditch, said sorten redistrating it into the continuation of the distribution of the continuation of the flume below, the debris being caught by it and carried to one side. The revolving screen is employed to connect the wheel in the flume or ditch, suitable mechanism being travel of the sorten is a small water-wheel in the flume or ditch, suitable mechanism being travel of the sorten is at right angles to the function. А томати Вевеви тов Тимев амр Ditch-ев. — David B. Hunt, Angels Camp, Calaveras

High and the control of the control ENGINE GOVERNOR. - George E. Dow, S. F.

GRIP-LELEATING DEVICE FOR CARLE ROADS.—
Joseph T., Coodey, S. F., No. 365,168. Dated Joseph T., Coodey, S. F., No. 365,168. Dated June 21, 1887. This invention relates to the means of class of cable roads and to that class of improvements therein which relates to the means for automatically releasing the grip from the cable, and neglecting the older bring to avoid sociate and neglecting to cast it off at certain points where the region would necessary another road. The invention consists of another road. The invention consists of a fixed in the road-bed, said bar hier relates of the graphle of the passing mediate suits to consists of a fixed in the road-bed, said bar being adopted to bear down upon the rear end of sudding the seast the pawl which holds the grip-lever to come in contact with and force the main lever of the graphle of the payles of the bear down upon the rear end of sudding the cable is cast off. The object of the inversity is one to open wide its jaw, whereby the cast of a coping the cast of the inversity is to provide simple and effective means for tion is to provide simple and effective means for tion is to provide simple and effective means for tion is to provide simple and effective means for tion is to provide simple and effective means for tion is to provide simple and effective means for tion is to provide simple and effective means for tion is to provide simple and effective means for tion is to provide simple and effective means for tion is to provide simple and effective means for tion is to provide simple and effective means for tion is to provide simple and effective means for the cast of GRIP-RELEASING DEVICE FOR CARLE ROADS.—

resoulng parties for their beroic efforts in en-deavoring to find the enfombed men. Several distinguished themselves greatly, and steps will be taken to suitably honor them. Great praise is rendered to the miners of the families. Many of the mining companies of the Cometook subscribed liberally, as well as nu-merous individuals. The bodies were removed from the indie, taken to the undortakers and placed in coffine as acon as possible. The entended miners were Edward Jeffrey, Martin Tregallis, Peter Eddy, John Kennedy, Ches. Dougherty and Foster Hamilton. The funcaris of these victims took place on Tuesday, when mining on the Compatork was generally suspended. Some \$25,000 has been subscribed as a relief hand for the families.

### Notices of Recent Patents.

Among the patents recently obtained through Dewey & Co.'s Sourntrive Press U. S. and Foreign Patent Agency, the following are worthy of special mention:

365,851. Dated July 5, 1887. This invention relates to a demijohn or bottle-case, and if consists of an outer case with top, bottom and three sides, permanently scurred Logether, and a false bottom and one side suitably braced to gettle a false bottom and one side suitably braced to gettler and hinged within the outer case, when consider a the construction of construction of a combination of plant or colored consists of a combination of plant or colored consists of a combination of plant or colored consists or rock, with a coment or pass within in consists or rock, with a coment or pass within the consists of a combination of plant or colored consists of a combination of plant or colored marble or rock, with a coment or pass within the conservation of the conser

one, you. Dated July 9, 1657, This parent of one deed July 9, 1657, The parent or onoreists of a combination of plain or obeyed marble or rock, with a cement or base within which the whole being shaped and polished to form tiles or mossice.
The irregular pieces of marble, rock, etc., are placed in a suitable mold and cement is poured on to obtain the desired thickness of tile or placed in a suitable mold and cement is poured jecting it to presenre, so the tile or plate may be removed from the mold before drying. The lists an used mently polished.

## Hopeful for America.

eigners in the U.S., inquired: "Or you be-eigners in the U.S., inquired: "Or you be-lieve this element could subvert this Govern-ment if it were thoroughly veganized for that Robert Collyer, the famous Liberal Christian preacher, is now in California for a sum-mer visit. An Oakland reporter, speaking

ment if it were thoroughly organized for that in the entire to thoroughly organized for that it were thoroughly organized for the purposes?"

"(100 not, 1 believe that it such a crisis should "timly and effectually. I consider the emergency arrive, the American will meet the emergency family agreeded man on the face of the earth can be inceed that the crucial measures necestary to effect his purposes, but when the time occurs and the earth conses he will assert himself with a power that will sweep all before him, leaving not a vestige will sweep all before him, leaving not a vestige will sweep all before him, leaving not a vestige will sweep all before him, leaving not a vestige will sweep all before him, leaving not a vestige will sweep all before him, leaving not a vestige organization of the merican principles by the enumeration of the agricultural districts, the mountain, plain, and any organization of the chief, for the true sentiment that will oppose, and ignorant bigors of the naites, socialists, and ignorant bigors of the metal oppose, to the mark of the metal oppose, the mark of the metal oppose, in the consistent of the mark of the metal oppose, the mark of the metal oppose, the mark of the confict of the mark of the comprehend the principles of our Government and they mistake liberty for license. They are not will be.

"A great deal is said about ameliorating the condition of the poor, but I do not believe in it they are the said about ameliorating the testing the testing the poor, but I do live pair they are the mark of the proof they are and and they mistake liberty for license. They are not well be.

to do so.

'Moreover, I am firmly of the opinion that to do so.

'Moreover, I am firmly of the opinion that the American is fully capable of decling with and forever settling this so called condict between the capital and labor, this antegonism between the laboring man and the corporation. The American will decide the question fairly and impartially.

I may be an optimist in these matters, but I am convinced that I am right, and the future will convinced that I am right, and the future will prove the correctness of my assertions."

### Mining Share Market.

The stock market has been rather lively this week, prices advancing a little to the satisfaction of bold-ers. The market shows more strength than for some time. It is stated that some promising feedback and burches of one have been cut by the prospecing drills in Belcher and Crown Point. At the pecing drills in Belcher and Crown Point. At the has one connection is one of great inportance. It will be of great value for the fine circulation of air it will also be of great value for the fine circulation of air it will also produce. Good ore has been found in a winze of great value for the fine circulation of air it will broaden to the fine circulation of air it will will broaden to the control and the share of the old Blue Wing stope.

The Savage mine is looking well. A streak of good ore 'bree feet in width base been dound in the upraise from M.O. 3 crossout on the raco level. This whole three-foot streak will average \$30 to \$40 a

whole three-foot streak will average \$30 to \$40 a foot whole three-foot streak will average \$30 to \$40 a foot The battery blocks in place, and the stone work completed at the new aster-mill of the Wevada Mill and Mining Co.; also the trame of the building which is to cover the period of the building which is to cover the period foots, and Hale and Morerosa. Ast the old bonasars mines they will soon be able to resume operations in the buildneaded section, for the maring the sour and they are only waiting for the ground to cool. The ore in that section should be maring that seam to test the base process of analgaring pulp direct from the batteries—that is, with maring pulp direct from the batteries—that is, with looking to the trunning of both mills by water-power looking to the running of both mills by water-power is being rapidly pushed to completion.

# "(OO'OGG\$) FIVE HUNDRED AND FIFTY DOLLARS

The present improved form of the celebrated "Triumfr" Ore Concentrator possesses many advantages over any other style of Varmers, Vanning Machines, or Concentrators, yet introduced to the notice of mining men. These advantages consist in the superior features which enter into their construction, and facilitate their operation.

They are constructed in the Sest manner; their trames being of iron, insures their solidity, durability, and perfect steadiness of motion when operated. They are built as compactly as their requisite strength will permit, weigh less, regular less freight space in boxes, by which their cost of transportation is reduced, and occupy less mill room when set up, Au important important important in the discharge from the feed and amalgam bow! The mining districts placed in front 6 and which the discharge from the feed and amalgam bow! The important important important important important in the discharge from the feed and amalgam bow! The important is in the reciprocal motion which is imparted to the intended and amalgam bow! The important mining districts taked when the stable in a stream of intended States, bearing evidence of the efficiency and superiority of this form of Concentrator, and we shall be shall be subjected bearing evidence of the efficiency and superiority of this form of Concentrator, and we shall be pleased to send Oirculars covering such letters of the considerable order.

Machines, and are ready to quote special prices for any considerable order.

last there apppears an editorial under the heading of "The Early Denuding Forces," In that article it is stated that we cannot conceive of

HOTTORS PRESS:-In your issue of May 24th

Early Dennding Forces.

have years paste, and aspeciately order processors of the present outful.

The Alice Company has, for the past seven years, been reducing about \$5,000 tone per years, been reducing about \$5,000 tone per annum. This amount regularly handled by annum. This amount regularly shows at one that stamps are not often hung up.

The number of employes on the mine and work, 260. These of men on the underground work, 260. These of men on the underground work, 260. These of men on the underground work, 260. These precing, and consist of miners, earner, station, tenders, imbermen, etc. The top force at the hosters, machinets, or preparers, lastions.

Pecting, and consist of miners, earners, station, tenders, imbermen, etc. The top force at the hosters, imbermen, etc. The top force at the station of the reduction works is about \$6. The money and the reduction works is about \$6. This makers a total of \$80 men and it is oftener more than less, as the employment of extra men is occasionally necessary.

A Winers' Hospital and Beading-Boom, where the other is and it is oftener more than less, as the employment of extra men is occasionally necessary. A Miners' Hospital and Reading-Room.

There is in connection with the money by accountry factors and Reading—Room.

There is in connection with this mine, supported and maintained by a monthly due spied by a concident. There is the comploye, a longitative where they streen titled to the bestof care in case of accident. This tied to the bestof care in case of accident. This is certainly a fine and on the company and a the sunshine for the dark. This is certainly a vise provision and is worthy of imitation by the more do work on. Thus they provide in the crompenses in the vicinity of the incorporated companies in the vicinity. The men do not miss their contribution of \$3 per month, and among so many there is sure to be some who will neglect to provide for more of the incorporated companies in the vicinity. The men do not meet a fine to provide for more than a success is evident, for the hospital formed increased so much through economical management in the reading room. This was done and they man accidents, that it was a confortable room, a nucleus for a line at the sealing room. This was done and they have a comfortable room, a nucleus for a man have a comfortable room, a nucleus for a line at the evenings in a quiet and instructive man. This furnishes all who wish to spend the the vernings in a quiet and instructive man. The vernings is a quiet and instructive man. The vernings is a quiet and instructive man. The Officers of the Company.

The Office and of the capacity of doing so with facilities for man, and they are all the deadly of the company.

The Officers of the Company.

The Officers of the Company.

Joseph R. Walker of Walker Brothers, bankers, at Salt Lake, is the president, and he is
increast of the Alice Company. A number of
the superintendent, Mr. W. E. Hall, goes thor,
times during the year he comes here and with
the superintendent, Mr. W. E. Hall, goes thor,
oughly over the mine and works. His many
years' experience both as a mining man and in the one
pany point that may be of interest to the company point that may be of interest to the company point that may be of interest to the company to know and act upon. Truly he is the
pany to know and act upon. Truly he is the
file of the incorporation and make will be
outerprise.

On the selected him as the promoter of their
which has selected him as the promoter of their
time past, is another selection that shows the
wise discrimination of the company directory.
W. E. Hall, resident superintendent for a long
willing, and there is no place on either mine of
milling, and there is no place on either mine of
milling, and there is no place on that shows the
milling, and there is no place on that shows the
milling, and there is no place on the activity
of the selected him as the promoter of their
him whole time is devoted to the company
are theory to deprive the property of benefit,
fars interests, and nothing escapes his attention
fars is a such a such place on the serionly,
larly careful, a desirable specialty certainly,
as a quark miner's life is fully hazaroous
enough when all the deprive the proqueds, and
looked after.

Mr. Hall's residence is on the grounds, and
looked after. The Officers of the Company.

They have reached the 700-foot level. Here, also, at each 100 feet, at a foot out and count of the feet, at a feet of the feet of the feet of the feet out and crossours arm, and the lead thoroughly operated. Ample provision is made for a stoping and room to operate the large force of men and room to operate 80 stamps supplied for wery days work. The Magna Charta and Valdamir are worked from the same shaft, being connect. Under the same root with their pumping engage and on the feet part and all and the feet of the fast property of the feet of the fast feet of the fast property of the feet of the fast feet part at compressors and at a diffusion of the fast part free feet of the fast feet part and the fast of the fast part free feet of the fast feet for the fast of the fast feet of the fast feet of the fast feet for the fast of the fast feet of t

At present consist of the "old mill," as it is usually styled, of 20 stamps. This is the original past of the one by the Walker Brothers before one the one by the corporated, and is a complete dry-orushing chloridizing aliver-mill. This process yielding the best results in the ores around Butte, is the one in sults in the ores around Butte, is the one in general use.

larly careful, a desirable apociatly octabily, as a quarks minet's life is fully hazarones as a quarks minet's life is fully hazarones or quarks when all the details are carefully looked after.

Mr. Hall's residence is on the grounds, and his good lady is one of the foremost in all age. Mr. and Mrs. Hall are highly respected by those who are so fortunate as to be neighbors.

Mr. Hall has the bappy faculty of securing the beat material in the country for sentence before earling as he man in a see mill foreman is one man in a safe back years of experience before coming thousand, and certainly could not be replaced, and back years of experience before coming as he had years of experience before coming thousand, and each he dot the reduction department, I should say he was invaluable. On the heart, and as the head of the reduction department, I should say he was invaluable. On the thoughout was in the workings William Shood is fully superstion is largely due, as he is personally familiar with every level, coasedu, wines, and in operation is largely due, as he is personally familiar with every level, coasedu, wines, and it will be workings. When we contion of ore to keep the large plant continually familiar with every level, coasedu, wines, and it will be seen at once soatsered to the four points of the compass, and thoughout the 13 miles of tunnels and crosser cuts there are in the mine, it will be seen at once the there are in the mine, it will be seen at once the the compass, and counts there are in the mine, it will be seen at once the the counts of the counts of the counts one.

here, and Mre. Hall are piggly respectively of the second that we cannot conceive of the head of the second that which in the country for assistance of the production of the best material in the country for assistance of the production of the best material in the country for assistance of the production of the percent of the production of the production of the percent of the production of the production of the percent of the production of the production of the percent of the production of the production of the percent of the production of the production of the percent of the production of the produc general and the orea strond Brate, is the one in the orea brothed in the orea brothed is general and.

The new 60-stamp mill is also a fully equipped dry-crushing chloridizing silver-mill, and is enactive to reduce the cost of handling at large amount of the cost of handling a large amount of ore to a minimum. In both the another, saving all the extra above westermills the mills the one is at organized mills the mills the ore is at organized mills the mills the cost of the cost of

I think that in many osess our local papers, in their a think that of when the product of the camp sasume manmoth proportions and to surprise the vertant pilgrims who may be "within our borders," take the avoirdupois of bullion shipped and figure it up at a flotitions value without any regard for the finences. As it is, without any regard for the finences are trequently copied in papers through.

## **CORRESPONDENCE**,

We satirfy, unindersed, opinions of correspondents.—Eds

(Concluded from our last.)

Written for the Parsa by our Correspondent, R. G. Hustox.]

Is named after the first promoters of this enter-prise. Walkerville is now a thriving village of at least 3000 people. It is, to a certain extent, tributary to Butte, as all towns are that are built oless to a main distributing point, but all the propose of trade are here represented.

their enterprise. Since May 15, 1880, they have millione in the formers. Since May 15, 1880, they have millione in have disbursed a sum exceeding the millione in soin, for the purchase of property, for labor, and general expenses. They have paid their stockholders nearly double as much paid their stockholders are three mines in the and indeed there are but three mines in the among the start shad the large amount monthly, an inconceivable amount no good can be done, and it cances many a heart to throw with joy to see the start and stripes run up on the company, and payday, when each individual will be remuer. Seed for the "sweat of his brow," and he in turn will be eabled to flying the insulation of seed ways are largely divided; some are prudent in own sweet will may jead him. As usual, the owner sweet will may jead him, As usual, the owner are sufficient of stripes in the barner of the interest it as and deposit in the bark for a rainy day, while his and deposit in the bark for a rainy day, while others, according to the parlance of the others, according to the parlance of the contrary, "blow it in "in the most expeditious of the contrary," blow it in "in the most expeditious of the parlance of the parlance of the contrary," blow it in "in the most expeditious manner possible.

forge as slowly as possible, and then take two freboards and lay the hot steel between them and server them up in a vise. As the steel is and server them up in a vise. As the sains the pieces of wood, and is frunly imbedded in an almost sir-tight charcoal bed, and when taken out cold will be found to be nice and soft. To repeat this will make it as soft as could be wished.

MECHANIGAL PROGRESS.

Tibrous Steel-A Men Metal.

What is termed a new metal—a "horous at the termed a new metal—a "has recently been produced and pate anted in England by Mesers, Dorman, Long & Oo, and Mr. Howson of Middlebro'-on-flass. This new product is exciting consider. The interest among the iron-masters of Emgland. The makers, according to a recent left for published in the \*American Manufacturer, hold that the new metal is well adapted for armorrplates—in the manufacture of which the pile has to return to the fire so often—since the silicious coating of each fiber protects it, it is silicious coating of each fiber protects it, it is silicious coating of each fiber protects it, it is claimed, from the action of the fire, where pure iron would perfish. For the same reason it since we might be used, it is inferred, for the bigs of soft pate to the bigs of the fire the bilges of shown that the piles.

The Inventor's Description of the Mew Metal.

The new metal was discussed to some little actent at the recent from and Steel Institute the recent from and Steel Institute meeting. The new little meeting. The invention was introduced by Mr. Howson in some remarks which he easel in the discussion upon the paper of Mr. Gongreaves Works, near Birming. Allan, general manager of the new British Iron ham. Mr. Howson stated that with respect to company, Congreaves Works, near Birming. Allan, general manager of the new British Iron ham. Mr. Allan to the difficult of the condition of the condition of the condition of the difficult. There was an old meethod did not purify it, by first granulating it and did not purify it, by first granulating it and then drawing it afterward. It was granulated in waster, and it had been done, he supposed, so times.

Granulating Steel Instead of Cast Iron.

It cocurred to Messra. Thomgo It Long of Inspect It to the state in the deal of Messra. Thomgo It cocurred to Messra. Thomgo It is also be at first granulated, but that it should at first be made into steel and then granulated first be made into ase tried with most perfect success and many tone had been made. The new steel was of the most delicate fibrous character. There was no difficulty whatever in the steel was of the most delicate fibrous character.

Treatment.

Oriticism Dgon the New Metal.

The criticism passed by Mr. Allan upon the new metal was not very complimentary. He remarked that he understood that Mr. Howson referred to a process of granulating steel—simply having the steel in a number of grains—insert here putting it into a furnace and balling it up afterward. Mr. Howson treated it very much as a puddled bar. It consisted of a series of a palle surrounded by cinder. He should not like to give that material a name—in fact he did not know what it was.

Perhaps an Inspection of the Material

Mr. Allan's Process Perhaps an Inspection of the Material Institution of the Material Itself, such has now become possible by the infractuction of samples into Staffordshire, might broad-tion of samples into speak with more respect. I shall not be doing him as injustice when I point out that of course he had a new fibrous point out that of course he had a new fibrous the price of Mr. Allar's composite metal is something like 12s. 61. per ton additional to something like 12s. 61. per ton additional to the price of dordinary ingut steel would perhaps the price of ordinary ingut steel would perhaps tell against it in the market compered with Dorman, Long & Co.'s new mixture.

In the part of the cost of the

apecialties that extra cost will be borne.

The Properties of Mr. Allan's Composite affect from Bateel and Iron.

Mr. Allan introduces his iron barsinto his ingois by fixing them in a cage, the size of the into the side dimensions of the ingot mold and into the unoccupied spaces of which the molben steel is unoccupied apaces of which the molen steel is like in from the bottom. Mr. Head at the last throman and Sheel Institute meeting said that the meeting said that the meeting specially a new thing. The flast the cinder into the steel whole remained there and cinder into the steel whole remained there and conder on the steel whole remained there and there and here and she with the steel whole remained there and there and for a sory considerable extent, destroyed its tended to assist its welding properties. It slee, so a very considerable extent, destroyed its on year, and the statute of the material would render it very useful for wet iron, etc.

The New Metal for Boller Manufacture.

The president, Mr. Daniel Adamson of Man.

The president, Mr. Daniel Adamson of Man.

chester, declares against the material for boilermaking as a competitor to mild steel. He states
that he should be very reluctant to use plates
of this composite character, because from his
early experience he was led to the homogeneous

A SIMPLE CURE FOR HHEUMATISM.—A correspondent of the Baglish Mechanic says: Let all of "ours" know the following: My wife has sufficed occasionally with acute rheumatism has sufficed occasionally with acute rheumatism in her feet, with paintul swelling, completely taking her off her feet for many days at a time. The following remedy was recommended recently and tried, and took away the agonizing pain in less than 15 minutes, and she commonded requestly in the many for the following remedy was recommended well with will be able to button her boots and walk without a stick or crutch: One quart of alumit, this makes ourde and whey. Bathe the part affected with the whoy until too cold. In the feeted with the whoy until too cold. In the makes ourde and whey, and after bath affect of the with them on as a poutice, wrap in flamely and—go to sleep (you can). Three applications should be a perfect cure, repair in aggressated cases.

Sorrel And Soare A Poisonous Confourd.

It was a very curious and almost unprecedented chain of canses, we imagine, which brought shout the death of a little boy at little boy at little about the death of a little boy at during the day a quantity of sorrel which he found near his mother's house. In the night, water which stood near his bedeate. Max day water which attood near his being held, the medical he died, and an inquest being held, the medical evidence was to the effect that the alfali of the sorigh acting upon the sorrel, had formed oxalic acting upon the sorrel, had formed oxalic sorie, and the solution of the sorie of the solution of th

THE NECK AND FERT are the most vulnerable parts in "catching cold," and Dr. Brown-Sequence and a source of the result of the series of temperation of the series of temperation of the series of temperations and places of consists in blowing upon the nest daily a stream of cold air from an elastic bag, and placing the feet in water, the temperature of which should be gradually reduced from day to day until the coldest water is used.

used as fuel. According to report, his process consists in heacing the oil and afterward adding from one to three per cent of soap. The latter dissolves in the oil, and the liquid upon cooling forms a mass having the appearance of coment and the latter showly and withproduct is hard to light, burns slowly and with product is hard to light, burns slowly and without smoke, but develops much heat and leaves out smoke, hot develops much heat and leaves and shout two per cent of a herd, black residuan.

To PRESENTE FENCE-Posts, —Charring the bottom of fence-posts, simply, has but very bottom of fence-posts, simply, has but very little influence on their preservation. Charcoal little influence on their preservation. Charcoal passes it rapidly to the uncharred wood will have been observed with coal test the posts a properties of the charcoal will then be utilized, causing the coal test to penetrate to a great depth than when placed upon the uncharred wood. The coal test also prevents the charred wood. The coal test also prevents the

OLAY FOR CENERTINO WARENTANKS, ETC.—
The seer of Aberdeen has instructed a Mr. T. Fraser of Aberdeen has instructed and go on they for prevanting leakage in reservoirs, water-franks, and so on. His plan is to puddle with dry compressed clay, which dry by is dried and ground before being applied to the bed of the reservoir, aron, or road, and is thus believed to render it more road, and is thus believed to render it more water, but being prevented to a certain extent from expending, it does not readily admit of from expanding, it does not readily admit of from expanding, it does not readily admit of inflictation.

BLACK VARNISH FOR IRONWORK.—To make a good black varnish for ironwork, take 8 pounds good black varnish for ironwork, take 8 pounds of saphaltum and fuse it in an iron leetile, then do f saphaltum and fuse in meseed oil, I pound dead these add 2 gallome of sull fume over), and boil them for about 3 hours; then add 1½ pounds of dark gum about 3 hours; then add 1½ pounds of dark gum has a mill fume over), and the consider the first when cool. After price it should be chimned with temperature to the proper consistency.

PETROLEUM JELLY OR VASELIUE Serves to clean and take away all traces of dirt from the hands after work in the shop or laboratory. For that purpose one need only rub the hands with a small amount of the jelly, which, penetraling into the pores of the skin, incorporates treshing into the pores of the skin, incorporates Wiself with the greasy matters which are there. Wash them warm water and soap, and the hands quickly become cleaned and softened.

# GOOD MEALTH,

The Cancer Discussion.

We give this week a report of another case of the came nature as many preceding ones. In this case, a period of seven years has elapsed the came nature as many preceding ones. In the absorptive treatment, and there has been up returned the cancer returned the absorptive treatment, and there has been on years. Farmham has a processor, Mrs. Farmham of Thlare Gity; age 50; no children; father and father's annt, also her cancer reached for cancer time; was a father and father's annt, also her time; was a there and father's annt, also her time; was a then deed by the cancer returned, and side, "It will close you up, makin." Sho was treated for cancer is the cancer returned, and sho said the cancer returned, and sho cancer of Thlare, Mr. But. Dr. Cook, and had been one year all at that and sho cancer of Thlare, who gave her no hope, and the cancer to the cancer of Thlare, who gave her no hope, and the cancer of the can

A Curious Tree.

whose roots straddle a prostrate redwood 100 feet from its upturned roots, at which point the loady of the redwood measures 6 feet in diameter. The redwood was evidently blown down by the wind. The roots of the fir tree come from the ground on both sides of the redwood coming together on top of the tree as it lay on the roots on either side—and the four the form the body of the tree, the tree, the from the tog of the log, upon which it secure from the top of the log, upon which it secure from the top of the log, upon which it secure from the top of the log, upon which it secure. By held by lateral roots running into the ground, This redwood tree, when standing, judging by the proportions of the part now remaining, which by actual measurement is 150 feet blownd where the roots of the fix strading the end of the redwood trunk extending 50 feet beyond where the roots of the fix strading of leathers. In the Elk River valley, a few miles out of Eureka, there is a natural curiosity, which the Standard describes as follows: It is a fir tree whose roots straddle a prostrate redwood 100

die it.

We cook pains to measure the main roots of die it.

We cook pains to measure the main roots of the fire, where they come up and form the body of the fire, and found them to be from 16 to 20 inches sores the top and over 2 feet through.

Lu building a logging road some 12 years since, a section of the redwood was cut ont to allow the passage of teams, and the wood was found to be in a perfect state of preservation, and it come student of the size of this date. Can some student of natural history tell us how many years it took for the fir tree to acquire the size of the fire took for the fir tree to acquire the size of the fire passage to the size of the fire took for the first the size of the fire took for the first the coquire the size of the first paint to the ground?

The Mining and Scientific Press has stated out on a new volume. We are happy to learn of the prosperity of the Press and hope it may continue, for it is deserving of the most liberal support. Byery miner should have the Mining Bupport, Byery is not only the advocate of his industry, but turnishes him with the best information on subjects of interests to him.—

Information on subjects of interests to him.—

Calarceras Chronicle.

On for Boors and Snoes.—If vegetable oil most scool sor and casto castor oil—is used for softening shoes at input, there will be no trouble in putting a good polish on them the next morning. It is the saimal oils that trouble the user in polishing. All oils should be kept away from the ing. All oils should be kept away from the kewed work of shoes or boots, and also from all kinds of the cast is a said also trouber fabrics.

make a hot solution of three pounds of common washing sods dissolved in a gaint brush. Marble which has become discolored from the weather, or the presence of gases in the atmosveather, or the presence of gases in the atmosphere, may be cleansed in the same way. To CLEAN RUSTY GRANITE use strong lye, or

paires.

Balthmorr.—The crosscui's on the goo level are showing a considerable amount of good milling ore.

The north crosscut will be pushed through to the west wall of the vehi. The downsal has never yet west wall of the vehi. The downsal has never yet west wall of the vehi. The downsal amount of milling ore is being extracted on the 400 level.

HALE AND MORCROSS.—The new working station milling ore is being extracted on the 400 level.

ALLE AND MORCROSS.—The new working station at the 400 level of the shalt is completed and a drift at the 400 level of the shalt is completed and a drift at the 400 level of the shalt is completed and a drift at the 400 level the north drift as feet. Both drifts at each, and and a drift in an quartz, from which some fair assays are obtained.

Soonwhow.—The east drift on the 300 level base at the 4sec. The miners have been employed in at the 4sec. The miners have been employed in putting in air pipe from the station to the face of the drift and in repairing the shalt above the 300 level has been temporarily discontinued on secount of foul air pipe from the station to the face of level drift and in repairing the shalt above the 300 level.

the incline.

Ckowyn Polnx,—Are taking out daily 130 tons of ore, which is being shipped to the mills on the Carann reduction. The usual prospecting work is being done. On the 400 level has been found a promising deposit of ore that appears to widen and promising deposit of ore that appears to widen and it about 800 feet of virgin ground. There is below to down.—The mill is steadily running, and there is a good showing of smalgam on the outside plates. All parts of the mine are looking well. Supt. Curtis has added a grinding and amalgamating apparatus has added a grinding and amalgamating apparatus pelow the copper plates. This is worked by the rocker motion of the crushers, and is intended to rocker motion of the crushers, and is intended to grind such rusty gold as is not caught on the grind such rusty gold as is not caught on the Batter.

CHOLLAR,—The work of timbering up the drift running between the old Chollar and the Sharon shaft is about completed. The winze 90 feet west of the Sharon shaft, alongside the old Blue Wing stope, continues in ore of good quality. Good prograces is making in the winze going down tom the 350 to the 450 level. Have got the old phast eleaned out to the dollers. It is 930 feet deep. The station is to the bottom. It is 930 feet deep. The station is bottly caved; much debuts has also tumbled down the incline.

MEVADA.

Would be of great benefit to that section,

Tuoliumne.

Good Russ.—Tuoliumne Independent, July 16:

The App quarts mine, at Jamesnown, though worked
with a small force and modest way, with a small force and modest way, with a scalal force and modest way, with a scalal force and section of 18:85 from 98 tons as one of the most valuable in the county. Recently, stand to 18:85 from 98 tons of 10:65, an average yield of \$88.85 for the ton. The ore is stoped through the great of \$20.05 feet, and the stope from 54 tons, an of 18:45 oper ton. The ore is stoped from 18 average of \$20.05 feet, and the swert her great or a feet in the great or one to the count and of the mine—length of chute of or in the great or and the with his mine, as the great of the count of the mine—length of chute or in the great or and the swert of the great or and the swert of the count of the mine—length of chute or in the great or and the swert of the swert o

THE LOWER TRINITY TOWNE,—Mr. Wm. Fowlet, superimendent of the company organised to turnet, superimendent of the company organised to turnnel the point opposite French Creek, was in town
the week and reports the work on the tunnel as progressing very favorably. The tunnel is 16 feet by 8
gressing very favorably. The tunnel is 16 feet by 8

BAYHORSE.—Sam'l Tennel took a trip over to BAYHORSE.—Sam'l Tennel took a trip over to Bayhorse and returned Friday. He says the Kamsborn Co. has got men employed around its worken born Co. has got men employed around its worken trains the smeller, grading for the new concernistance building, bauling ore, etc., as thick as black, brids. Lots of work is being done, and everything is rushing.

ONE-HAR GOLD.—Pete Johnson struck a three aim de gold ore in his claim on Custer mounting with a supply of the prought a cantull and bis pockers full down to Custer, which were seen by our informant, and to Custer, which were seen by our informant, and to Custer, which were seen by our informant, and to Custer, which were seen by our informant, and the done in his way the down to Custer, which were seen by our informant.

VETCHUM.—Keystons, July 9: Mt. T. Sprawls of Bellevue is prospecting the fulls above the mouth of Pellevue is prospecting the fulls above the mouth year the found stvorable indications, and a number year the found stvorable indications, and a number of seasys made of the rock found showed well in gold and silver. J. C. Petker, now in Kerlenhun, who ownse a gold claim in Elle City district, sent 400 ownse a gold claim in Elle City district, sent 400 ownse as gold claim in Elle City district, sent 400 ownse as gold claim in Elle City district, sent 400 ownse and one ounce of platinum. Haggin & Tevis sent an expert to look at the property, and an offer sent an expert to look at the property, and an offer was made to purchase the same. The views of the owner and expert regarding the value of the claim. The Verbe Rotted Verde ores carry gold and per 19 low, but as a Uplied Verde ores carry gold and shipped with profit.

A low days ago, when a gentleman at the East of the West ago, when a gentleman at the East assert mining and emeting at Jerome, in the Black start mining and emelting at Jerome, in the Black Hills, five or six miles west of Verde river, the fact mining and emelting up again of United Verde mines and ameliter will be of great benefit to us all. The start will be greedily followed by the working of start will be greedily followed by the working of start will be greedily followed by the working of Black Hill region, between the Squaw Peak and its morthern point. Successful operations in the mining irrigating direbes will be unast, the crokerister, all. More morthern point. Successful operations in the mining irrigating direbes will be out a narrow gauge to Verde and Bullock built, this move to work United Verde and content of the count of the content of COLORADO.

posted claim it will surely net \$500 to the ton. There are many other valuable mines in the district, notably the Central Montaula King and North Star series.

There should be a mill erected out there or here in town, to reduce the ore of the mines.

Proche District.

SATISPACTORY.—Proche Kiswal, July 16: Upon the whole, we consider the minely prospects of this first was exacted the minely prospects of this home. We do not a by the careful inquiry and personal observation.

BRILE ISLE.—Vimes Neuron, July 16: Work as suspended, pending the trepsire on the that was suspended, pending the trepsire on the Narwice. We can be the contain the properties of this interpolation.

BRILE ISLE.—Vimes Neuron, July 15: Nork Warsjo shaft, has Just been resumed.

MANALO.—Work of reimbering yo feet of the shaft has just been completed, and work resumed at all points to-day.

GRAND PRIZE.—The west 300 crosscut has been advanced so feet during the past week, the last few their bowing ledge matter.

DIANA.—East urescue from when you crosscut has been blanks.—East orescue from week, the Isst few SIAMA.—East orescue from the resumed at the last few the start far was supposent the past week, the last few start far was supposent the past week, the last few BIAMA.—East orescue from the resource of the start far blanks and the process of the start far was supposent from the resource of cool level of 150 miles of

the search points. Good progress is making in the west work of repaining damages at the Bonners shaft, wow to depaining damages at the Bonners shaft, we have not be bottom of winze Mo. The repairing the joint from the bottom of winze Mo. The repairing the joint of winze Mo. The repairing the joint of white search of this sevel.

KHICKERBOCKER,—Repair work to the machinery a should be commenced on the return of levels will probably be commerced on the return of levels will probably be commerced on the return of MORTH OCCIDENTAL—Work will be commenced transport of the Cocidental as about on the commerced of the Cocidental as ALTA.—The grading for the fundations of the formation has been made.

MUSTICE.—The work of driving the carpenters are treat points, and good streaks of ore are being found, and prospecting is actively continued.

JUSTICE.—They now have on the damp 800 tons one with a full shift of aniners.

JUSTICE.—They now have on the damp 800 tons one with a full shift of aniners.

BENTOW.—Have darked through the maine west one with a full shift of aniners.

DEST.—Sinking has been received at conce with a full shift of aniners.

DEST.—Sinking has been received at one of ore, and prospecting is actively continued.

DEST.—Sinking has been received the wince, and no ore is at present being extracted.

LADY WASHINGTON.—On the 735 level the north drift is in quartz, yielding low assays.

DIANA,—Best crossour from the zgo-foot level of S. B. Lele has been extended a total distance of So etc. There are indications of the close proximity of wein.

ARIZONA.

HAVWOOD,—The Thompson mill is the only one to present engaged in working the ore, but the mangeneral engaged in working the ore or two mills actional. The mine is looking well in every part.
GOULD AND CURRY.—Work has been resumed the coan and proper in progress at the coan and proper in progress at the cast points. Good progress is making in the work of the painting in the CURRY.—Work of the coan and shalf.

STATES THE COAN THE C

have strained a depth of 1g feet. There is about to one of or on the dumps.

The Evening Stark, owned by Shamon and Lapanta. The ore the boys shipped to Reno some time with the Lapanta. The ore the boys shipped to Reno some time sgo netted them more than they expected. While they estimated the start set of the total the surplies of more extensively prosecute the work. While they estimated it would be surplied to more extensively prosecute the work. While they estimated by Knapp, Laws and other distinct. It is owned by Knapp, Laws and other who have leased it to Herb, Hartson and Myl. Liber. The leases have sub-let a portion of the claim. The leases have sub-let a portion of the claim. The lease of the claim in the good of the claim in the good of the claim in the sub-let work. They intend the sub-let is some of the claim in the good of the sub-let is sub-let in the sub-let in sub-let in the sub

Central, and but a short distance east of the Lapanta road. They have dug holes along the course of the very robe and are now sinking an incline on the ledge and have attained a depth of 15 feet. There is about to tons of ore on the dumps,

THE EVENING STAR, owned by Shannon and

The GOLD BAR is in a very good locality to be called as it is. It bears on the Pamlico and is owned by D. Tobino, who bas done some work on it, and one of the best claims on the hill. Locations are numerous in that immediate vicinity, owing perhaps to the immense richness of the ordinity perhaps section.

the in the past of the past level the north the past level the past parts, yielding low assayes.

Gold.—Esmeralda Wew, July 16. No sooner had the Lapanta shut down than other mines of past defer Lapanta shut down than other mines of past section is evincing greater prospects started up. Every one past line the level provision of this month—it may extend the later portion of the mouth—it may extend the later portion of the later portion of the later perspects are stoked; levely conce out there have been seen to be reduced; every the later past later provided in sacking on pay atreases.

The HALE Moon BAY is also being worked; but had seeked and the boys are extracting rich ore from the Bay tunne; levely plenty more in sight.

SAN JUAN adjoins the Half Moon Bay and plenty more in sight.

Central mines on the south; the ledge has not been weeks work, it is low grade, but was easily extra from your extended. Tom Daky has made a loose for two from around the grass roots.

The Cherch and Daky has made a loosein of a franterion of the Cold Bay on the south is south in the south of a sand though of has agreed to run a tunnel to the ledge. To have south two feet wide on man employed who has agreed to run a tunnel to the ledge. The vain is about two feet wide on the ledge. The low grade, it is a paying proposition.

The Cold Bay is in a very good locality to be cold to the later of low grade, it is a paying proposition.

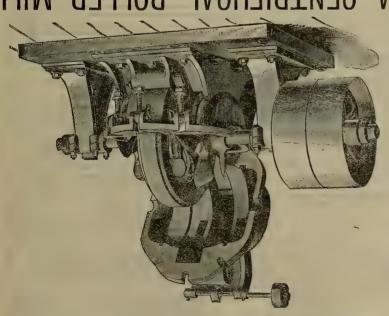

The later is a series of the south is a paying proposition.

OCCIDENTAL.—Work is progressing as usual on e. 48, 100 and 200 levels. In the lower tunnel upties. No. 2 was extended to feet; total length, 251
et. This uptaise is in quartz showing value by
323.

ANDES.—On the 240 level are running north along the course of the veta. On the 175 level a crosscur is being pushed west. Are cleaning out the station at the 350 level preparatory to resuming operations at that point.

promising body of quartz and ore found in the Crown Point, at the 400 level, will extend into this

FOLDING BED.—B. E. Ferrar, S. F. No.
FOLDING BED.—B. (2012).

36,513. Dated July 12, 1887. This is one of the control of the colling, beds in which the bed fall of July beds of Lift, 3. This is one of the colling beds in which the bed farms and escotional, and is adapted to told farms within a suitable casing, which forms, when the bed is olosed, a cabnet or wardrobe. It is bed is olosed, a cabnet or wardrobe. It is bed is olosed, a cabnet or beds in which the particularly of the collines, and is monnted upon changeable or movable pavots, whereby it is readily adapted to be folded to its position and again construction. The patent covers certain construction of the patent covers certain construction of the patent covers certain construction of the construction of the construction of the construction of the construction that were the construction that construction that the construction further consists of the middle of the bed trame, is side odges of the middle of the trame while its invention further consists of the middle of the bed trame, which is the consists of the middle of the bed trame to which it is attended. The object is to make a wovenwrite mater of the invention further consists in the articles more confortable to lie upon the middle of the bed frame to which it is attended. The object is to make a wovenward that the confortable to lie upon than the colore.

The luck and the confortable to lie upon the confortable to lie upon the colore.

The luck and the colore.

METALLIC LATHING. Daniel Pr. M. Little, the based of the dipole.

METALLIC LATHING.—Daniel P. N. Little, S. F. No. 366,328. Dated July 12, 1887.

This invention relates to that class of metallic strong as a bond to the plearate elevations and elevate lath, and which serve as a bond to the plaster. The invention consists, in connection with a strong and elevation consists, in connection with a cross-ties formed by the depressions and elevation formed by the depressions and elevation, and which serve to close up the opening tones, and which serve to close up the opening the proof. It consists, also, in connection with a metallic lath of the place of the strips may be secured to the back of the lath direction with a metallic lath of the place of the strips may be secured to the pack of the strips may be directly therefore, whereby said strips may be fittled and securing as the strips of tense of the strips and tense study and it further consists in a novel means for securing said iron channel strips to the lath and to securing said iron channel strips to the lath.

for secouring said iron ohannel strips to the lath, Gamuel. Chard.—Bamuel.

Murray, S. F., No. 366,343. Dated July 12, 1887. This is an apparatus for disoharging ballset or cargo from vessels. It consists of an attachment to the hoisting-bucket, and in connection therewith of a device fixed to the end nection therewith of a device fixed to the end rigging, with connecting ropes and tackle of a boom or at any other suitable point in the rigging, with connecting ropes and tackle and read and the proper are used, the nanal appliances require a system see used, the nanal appliances require a system at the pand and a number of men to operate these devices. This invention is designed to furnish an automatically working mechanism which is easily operated by the seeds of the seeds o

Southern California.

We admit, unindorsed, opinions of correspondents.—Eds.

**CORRESPONDENCE.** 

Of the county, or, as it has sometimes been the county, or, as it has seen the county in the desert division, lies each of the desert facinic railroad passes through The Southern Pacific railroad passes through this section, within which is the famous desert vation as depone on the ingress degree of cultilabel population of the county.

The Middle Division of the county.

The Middle Division of the county.

Lying between the two ranges of mountains all idea to, comprises numerous broad and fertile laded to, comprises numerous broad and improved pastures of mountains of the county as are low being rapidly taken up and improved as arable lands, and in some of them thirting as arable lands, and in some of them thirting towars and improved as arable lands, and in some of them thirting as arable lands, and in some of them thirting as arable lands, and in some of them thirting as arable lands, and in some of them thirting as arable lands, and in some of and improved as arable lands in the transfer of these very indicated indes its which the California Southern alleys had every the capture of a barren desert, forever given that road was constructed, some four or five very to cattle and sheep, the most while the fact of the capture the same road as low weeke since the road was completed, scarces a house was to be season, or a cultivated field or garden. While passing vore the same road a few weeke since the capulation, the willages were passed devery few miles.

The hotels have been built for the accommodation of the nough the road was to be completed, scarce a house was to be corting and villages were passed every few miles, thou of traveliers and villages were passed every few miles, thou of traveliers and residents, fruits few miles the organisms and villages were passed every the miles. The actual was and residents, fruits few miles are in frungs with the trough which it winds its nountes the organisms and villages were passed every the miles.

The hotels have been built for the accommodation of the organisms and residents, windstrien the entering ward outlets and string to the county are essen all slong the prophlates and subjects in the county, or the land of every of the new passed every land of the county, or the land of the passed with the cape of the passed of the county.

The Third Division
The Third Division

strengthened by the further fact that much of the scale is and valley and the stable land of the county was broken into the stable land of the county was broken into the stable land of the county was broken into the stable land of the county was broken into the stable land of the county was broken into the stable land of the stable land. But the stable land is the stable land into the

Topography of the County.

Moreease in Population and Westler. Motwithstanding the disadvastages, in many points of view, nader which San Diego has been placed, it has nevertheless more than kepte even passes in the control of the propulation and wealth with the state in helpful of 1860 and 1885 show that in Dorth population and wealth than either Los San Diego has made a larger proportionate gain in both population and wealth than either Los Santa Barbars or Ventura, during the half. Santa Barbars or Ventura, during the half. too, decade between those dates; and that, too, along the more northern conties began with a larger capital in population, and were the estimates content in population, and were the estimates to lay saide the business of stock raising for cultivation of the soil and the building up of names centers.

Increase in Population and Wealth.

EDITORS TREES:—Several years ago I gave to the public a series of my tests in black Sand.

What coar me many montres of labor and montre theres;—Several years ago I gave to the public a series of my tests in black sands. The coarse of coin. I gave to the public for nothing, thereby to call attention to what in words of coin. I gave to the public for nothing, besset these of low wages might result in two public by the way of throwing more gold into public by the way of throwing more of these expension. The results of some of these can circulation. The results of some of these expension. The results of some of these expension. The results of some of these expension. The results of come of these can drived in the first short of the content of the coarse there has been to years more on less at the coarse there has been to years more on less that of the coarse there has been to year and the coarse there is a drift on were given to the coarse the black sand accompanying the cand accompanying the cand accompanying the cand accompanying the form \$50 to \$500 s ton. I have concentrated the latest the black sand accompanying the the wash, would prove a paying the wash, when properly concentrated, arguing sand all, and receive a failure, would have been a dividend in the black the black sand accide when the coarse and the cartain the sand strain in the the sailure and the cartain the the sailure and the cartain the black sand the proper \$10 to \$500 to \$500.

I do not doubt but the ton properly control of the same that the can be sail the sand the can a plenty of localities that produce are plenty of quartz that will go \$5 s ton. I they can be black as and acciding the properly of the sand the sail at the end are and many of the sail at the meters high, and from theirs are some 400 meters high, and from their samings a mag, ninear two of the plain and of the Medininear work of the plain and of the Medininear work of the plain and of the Medininear sections of the meters of the Medinine are known in the principal markets as clear white, veined and statusry. The seconding as its pproximates to the resident of the sercophagus, the white is the most common, and waries in color and fearines of or to the changing color. In the construction of the sercophagus, the white the white is the white the white is preferred because of its purity. For waristions of the sercophagus, the white this purpose the clear white is used, which is barder and color part of the serior of the preferred because of its purity. For waristions of temperature, of the night hing tint, of hard and compare to the interior of the form color, and without or the interior of the fering. The year of the white the interior of bind the form of the seconding, it is of a without walsed according to the discusses and regulatively of the veine. SCIENTIFIC PROGRESS.

The Three Forces-Physical, Vital and

The Economies Effected by the New Amer-The Economies Effected by the New Amer-fean Inventor.

About 75 tons of tuel have been required hitherto to produce one ton of sodium; by the Cartent process not more than 25 tons are readers are probably well aware, in, as my readers are probably well aware, in the wear strain upon plant. It is calculated that a steel crucible will stand at least 200 operations, which would represent not more than a penny per pound of sodium produced. The wear and test of furnaces is calculated at one penny per pound of sodium produced. The wear and test of furnaces is calculated at one penny more, giving for these two items twopence per more, giving for these two items twopence per pound, as compared with two shillings under the old process. As I have already intimated, larger works are to be spected.

The Plant Employed by Mr. Cartner:
In the plant erected by Mr. Cartner in London he dispenses with unwrought from cylinders
and substitutes large cast-steel crucibles. Need
and substitutes large cast-steel crucibles. It is ay that the order to expel the they comples are first heated in order to

## Mining Turbine Water Wheel. JAMES LEFFEL'S

These Wheels are designed for all purposes where limited quantities of water and high heads are unliked, and are guaranteed to give more power with less water than any other wheel made, Being placed on horizontal abatt, the power is transmitted direct to abating by beits, dispensing with genting.

Estimates furnished on application for wheels specially built and adapted in capacity to suit any particular one.

Estimates furnished on a splication for wheels specially built and scapped in capacity to suit any or application of wheels specially built and scaped in each of this form of construction, as well as the ordinary vertical Turbines for Wooden Penstocks and in Iron Globs Cases, free of cost, by applying to the manufacturers.

STELL

## **\*(00'099\$**) FIVE HUNDRED AND FIFTY DOLLARS

The present improved form of the celebrated "Triumer" Ore Concentrator possesses many advantages over any other style of Vanners, Vanning Machines, or Concentrators, yet introduced to the notice of mining men. These advantages consist in the superior features which enter into their construction, and facilitate their operation.

They are constructed in the best manner; their trames being of iron, insures their solidity, durability, and perfect steadiness of motion when operated. They are built as compactly as their requisite strength will permit, weigh less, regular less freight space in boxes, by which their cost of transportation is reduced, and occupy less mill room when set up, have notion which as the discharge from the deed and amalgam bow. The improvement is in the tectpropage in front to fand which as the discharge from the feed and smalgam bow. The improvement is in the tectpropage in front to fand which as the discharge from the feed and smalgam bow. The improvement is in the tectpropage in front to fand which stees the discharge from the feed and smalgam bow. The improvement is in the tectpropage of and which askers to be despited in front to the discharge from the feed and smalgam bow. The improvement is a firther recently been introduced into the factor of the smalgam bow. The improvement is in the testpropage of and which askers in the discharge from the discharge from which is improvement is in the feed of and which askers in the discharge from the discharge discharge discharges of a factor of the discharge from the discharge of the testpropage of the discharge of the discharge from of Concentrator, and we shall be of send Circulars covering such letters of satisfaction of the discenting of the discharge from the discenting versions for send discenting versions for send discenting such letters of sand considerable order.

The pile of Daniell is one of those most frequently used in the industrial stre, and renders are greated in the industrial stre, and reached service in galvane-plastic laboratories by resceed it its regular effects. Mr. Carre has succeeded in diminishing the interior resustance of the parparation, replacing the porous vessel by a papel present increasing the power enough to produce the electric light (arc) with enough to produce the electric light (arc) with

enough to produce the electric light (arc) with 60 elements.

The Minotto
The observable of the selectric light (arc) with 60 elements.

The Minotto of the send in Italy and in English line, constructed with sand instead of a porous vessel, impregnated with a sale solution of sulphate of copper, in which do not mipel placed upon the sand separates it from the peper is submerged, a lest of securite papers of copper is submerged, a lest of securite papers of such the send separates in the solution of a pile with two liquids, which do not mingle a pile with the send separates in the solution of a pile with the send separates in the solution of a solution of the send water and the send opper. In this is placed a plate of copper united to a wire of the same metal covered with the send of such a send of such a serial select of the send of such a select with the solutions of such a solution of the solution of the solutions of the solution of the select of the solution of the solution of the solution of the select of the solution of the select of the solution of the select of the solution of the select of

Pile of Mr. Heynler
Is constructed of a porous vessel of papel
uporgaminado which contains the sinc; the other
element is a plate of copper. The solution that
Mr. Reynier employs is sulptate of copper
and weak caustic, thus increasing the electromotive force of the Daniell element. In 1838,
motive force of the Daniell element.

where we was the consistence and the case of the consistence of the Daniell should be consistent of the Chrone.

Becquerel and Grove.

English physioists, conceived the idea of forming a pile, using potesh and nitric soid for dependent of the consistence of a vessel of glass partly pile of Grove consists of a vessel of glass partly pile of Grove consists of a vessel of glass partly pile of Grove consists of a vessel of glass partly pile of white a cylinder of side upon a consist of the two extended of the consists of consists of the consists of the consists of the consists of the consists of consist

.tasın ei sonatsissı Have constructed a pile with water and sul-plate of mercury which absorbs the bydro-gen and leaves free the mercury; this pile needs little attention, since it suffices to replace the water which is evaporated. Its internal resistance is great. Becquerel and Marie Davy

The water which is evaporately, its internating the water which is evaporated, its international profiting by a trial made by de la Rive more than 30 years ago, organized a pile of peroxide of manganese, which is how universally employed. It is a vessels of glass, half thal of a solution of lorthidate of glass, half that of school, peroxide of manganese and rosin. Chemical action takes place only when the circulation of lorthidate of mamoniac, in which is closed, the electro-motive force being then out it is closed, the electro-motive force being then out it is closed, the electro-motive force being then out other attention than to replace the water considerable. It does not amon used in electrimonal and call the water and other attention than to replace the water trimbres. The pile of sequioxide of iron only by the substitution of ordive force is conditional and dailiers from that of Irolanche of Ironaganese. Its electro-motive force is considerable, but it has an enormons internal resistence. It is employed for medical battenies sieterable, but it has an enormons internal resistence. It is employed to medical battenies which requires contrinuous current.

Warren de la Rue,

An Tingin pequite a continuous current.

Warren de la Rue,

An English physicist, has constructed magnificant piez of chloride of silver. In a cylindric y cent piez of chloride of silver. In a cylindric y solution of olorhideato of ammorate, he introduces the soluble electrode of since without amalgamating, and the pregative formed of a ribbon of silver, and the whole inserted in the cylinder is of silver, and the whole inserted in the cylinder is of silver, and the whole inserted in the cylinder is of solved by degrees, and replaces the silver in the chloride. The silver and replaces the silver in the chloride. The silver in the chloride of silver, and the inserted in the mass of the chloride of silver, and the insertion of the chloride of silver, and the latter supplies the chloride. In all these piles the regain electrode of lorine necessary for the dissolution of the chloride. In all these piles that cashly separate the chloride of silver, and the negative electrode orbiorine notes and the comper, platinum, carbon, silver—is surplies the byloride of silver, and the silver—is surplies the regain of the component, platinum, carbon, silver—is surplies the platinum, carbon, silver—is surplies the platinum, carbon, silver—is surplies the tending of the corprore that is produced in the piles and prevents paralyzation. A mixture of two substances oxygen or orborine or disconsisted the silver and discossonygen or orborine is likewise takes place.

lands embrace every variety of soil, and are suiteed to an infinite variety of outlivation. They
are subdivided into tracks of 5, 10, 20, 40, 80 and
160 cores. The title to these lands is as perfect as any in the State—a grant confirmed
by United States patent.

San Diego and Its Surroundings.

(Editorial Correspondence.)

The city of San Diego will ever be a memorable spot in the history of California as the lost cality where the earliest steps in civilization on this portion of the Pacific Coast were taken. It was here that, on the Solh day of July, 1769, Father Junipero founded the first mission, which constituted the great chain of missions, which subsequently extended from thence morthward as as Sonoma, comprising S1 in all, as fat as Sonoma, comprising S1 in all.

and legislative action can make them.

The Climate of San Diego
It probally the most perfect seaside climate in the world. An official record kept at the U. S. Signal Office in that city, embracing the period Signal Office in that city, embracing the period in these 10 years, embracing 3653 days, there in these 10 years, embracing 3653 days, there were 3533 days in which the mercury nos an average of only 12 days in a year. Further, there were only 41 days on which it peased that point, an average of only 12 days in a year. Further, there were only 41 days on which it rose above 95°, and only one day on which it rose above 90°, but 4 days on which it rose above 10°, and that was on the 23d day of September, 1883, when it touched 10°.

Total day of Dependent, 1003, when its bounder of the 200 day of Dependent, 1003, when its bounder of the 201 perallel, and locality a few miles below the 32d parallel, and which curs the Ashantic States three degrees be deorgia and South Carolina; 101 course there Georgia and South Carolina; 101 course there never can be snything like a "heated term" in a never can be snything like a "heated term" in fast leffects in most of the Mississippi and Atlantic States.

Then, taking the other extreme of the 3653 days above alluded to, there were only 93 days on which the thermometer fell below 40°; six on which the thermometer fell below 40°; six below 35°; two as the was 35°; two as the substitution of the substitution of

tell below \$55, two as low as \$2\$, and mone which fell below \$55, two as low as 0.00 and the which fell below that point. On no day did the there would not be difficult, if not impossible, to find any place among civilized localities on the globe averaging such an equable temperature.

It would be difficult, if not impossible, to find the strongbaren, a temperature of the chynese of the strong the strong of the chynese of the strong the strong of the chynese of the strong of the chynese of the strong of the strong of the chynese of the strong of the strong of the chynese of the chynese of the chynese of strong of the chynese of the c

Looking After the Building Stone.

The State Mining Bureau has issued the fol-

William Irelan, Jr., State Mineralogist, William Irelan, Jr., State Mineralogist, William Irelan, Jr., Wandell Jackson, With the co-operation of A. Wandell Jackson, Professor of Mineralogy, Petrography and Economic Geology in the State, and to that end building stones of the State, and to that end building stones of the State, and to that end invites your active sasistance in procuring the necessary material. The report will cover a said-taken microscopical description based on microscopical axamination of thin sections; chemical composition where accessary; density; tests of properties for moisture and water; weathering properties for moisture and water; and general adaptations, the following material will be required for each stone examined:

The condens of none and one-half inches, edge to sughly dressed.

Two cubes of two inches, edge roughly dressed.

Two cubes of two inches, edge roughly dressed.

# Don't Fail to Write. Dealings in mining shares market. Dealings in mining shares during the week without being fairge have been fairly settive. The late break in the wheat market had a tendency to-make first what financial embartassment might ensure forthing, however, beyond a weak feeling for the Politing, however, beyond a weak feeling for the evanescent than was expected, but few loans on mining shares baving been called in. Latterly the banks have, in fact, been a little forthy should see the ing this sort of collaterals, wherefore the brokers have banks have, in fact, wherefore the brokers have share market became a little pancky, and a sharp share market became a little pancky, and a sharp share market became a little pancky, and a sharp share market became a little pancky, and a sharp share as the leading brokers stood in and given not been deeply indebted to these institutions. With the closing of the Grain Board, the mining share as a seeneral feeling of confidence in Comstook shares, the week closed without any market deeling from the seek closed without any market deeling shares, the week closed without any market deeling from proces. Deveryhing confidence, the tone of the market may be said to be bealthy, movements being lively without a tendency to overspeculation. Don't Eail to overspeculation.

Mining Share Market.

The following is an except from a communication by M. A. Woelkeff to the Societe decation by M. A. Woelkeff to the Societe decay and the sean over a great portion of the continent of the continent of the seen over a great portion of the continent of the meridian of Serlin, but the median for the seen from will be best seen from will be best seen from the continent of the meridian of Serlin, but the most two the canter and to the seatward of Ruesia, but the most favorable continents for observation will be in the violatity of distinct for observation will be in the violatity of the seast of Lake Baikal the colpassion of Mongolia and Mantehonuria, over a stript of the scient of Mongolia and Mantehonuria, over a strip of the island of Mongolia and Mantehonuria, over a strip of the western coast mast the bay of Possiet to the western coast mast the bay of Possiet to the seath of Vladivostock.

Eclipse of the Sun.

be sent.

Jesh specimen must be carefully wrapped sect.

Jesh specimen must be carefully wrapped and slip packed firmly in a wooden box and addressed, with inclosed label, to the '' Mining Gressed, with inclosed label, to the '' Mining Bureau, Pioneer building, San Francisco, Treight or express charges prepaid.

A letter should likewise be addressed to the Saste Mineralogist, giving detailed information as to exact locality and extent of deposit, present or exact locality and extent of deposit, present means of transportation to nearest market, buildings in which the atone may already bave one used and the name of the open used and the man of the open used and the man of the peen used and the name of the open nay already.

1½ inches.

Twenty thin ohips or flakes, approximately one and a half inches square.

In the preparation of the cubes it is imporbant the famt to mark which is the edge and which the bedding side, unless this is sufficiently obvious from the texture or grain of the rock.

All of the foregoing specimens should be carefully selected from a sufficient depth to income in the fresh material and as complete freedom as possible from weathered surfaces. In addition, one or two specimens particularly illustration, one or two specimens particularly illustrations or two specimens particularly illustrations of the particular p

Two ghly dressed.

Two cubes of two inches, edge roughly chipped.

Two cubes cut out conformably with the bedding of the rock of two and one-half inches edge if rock is soft, and of one and one-half inches edge if rock is hard.

Ten hand specimens roughly chipped to the size 4kx3kx1k inches.

Six hand specimens polished on one side and Six hand approximately dressed, otherwise of the size 4kx3kx1k inches.

If inches.

Inventors on the Pacific Coast will find it greatly to their advantage to consult this old experienced, first-class Agency. We have able and trustworthy Associates and Agency ingtons and the capital cities of the principal nations of the world. In connection with our editorial, soientific and Patent Law Library, and record of original cases in our office, we have other advantages far beyond those which can be offered home inventors by other agencies. The other advantages far beyond those which can be offered home inventors the Gines, and the frequent information of Patents already granted, for the purpose of determining the patentality of inventions frought before us, enables us often to give advice which will save inventors the examination of Patents already granted, for the purpose of determining the patents the inventiors the inventiors will associate the content of applying for Patents upon inventions which are not new. Circulars of advice sent free on receipt of postage. Address DEWEY & CO., Patent Agents, 352 Market 81, S. F.

#### Notices of Recent Patents.

Dewey & Co.'s Sourarivio Press U. S. and Foreign Patent Agency, the following are worthy of special mention: Among the patents recently obtained through

WORTHY Of special mention:

CABLE KALLWAY.—G. W. Douglas, S. F.,
Cal. No. 367,137. Dated July 26, 1887. The
novelty in this invention lies in the construction of the transverse frames forming the loops
and yokes which support the stot frome and
also the rails, and unite the two together. The
che rails, and unite the two together. The
also the rails, and the means for securing
the rails to the frameworks to that they will not
sist of a union of T and angle iron, bent to the
sist of a union of T and angle iron, bent to the
sist of a union of T and angle iron, bent to the
sist of a union of T and angle iron, as the frame is
stronger than that made of bent to the
attention only one-balf as heavy.

TREE COVER AND FURIDATOR.—J. P. Chlver,

TREE COVER AND FUMICATOR .-- J. P. Culver,

Los Angeles, Cal. No. 304,134. Dated July 26, 1887. The purpose of this invention is to clear trees from scale and other noxious insects of the more of more peculiarly constructed it consists of one or more peculiarly constructed trees to be covers being also connected in series, so that one or more of the trees may be easily applied to constructed that they may be easily applied to the trees and readily transported from tree to the trees and readily transported from tree to inclosed by them is filled with a suitable noximolesed by them is filled with a suitable noximolesed.

No. 367, 152. Dated July 26, 1887. The DUMB-WAITER STOP. J. J. Mahony, S. F.,

cal. No. 367,152. Dated July 26, 1887. The object of this invention is to provide a simple and defective mechanism for catching a dumb and defective mechanism for catching a dumb variete at any desired point and hanging it up positively. The present stop is an improvement though, though it involves the same principle of operation. Briefly asted, it consists of a gravity osteon the waiter, which is arranged well. The disengagement is effected by a gravity trigger on the catch, which throwes the notched strip. The stop is very simple and at the same time effective.

The Road-Runner.

runner. I thought that bird was a friend to economic agriculture, and as such I praised him. I take it all back. The road-runner is a planete, and a robbert but he is a stalenced agricultur and a robbert prompt of the content of th knowledge of ornithology and all the other ologies, I formed a high opinion of the fast trot-ting bird known to Pacific Coasters as the road-EDITORS PRESS:-By reason of my limited

of our great republic. Alining is the great over the past ages, for hietory plainly tells us that barbarous races became civilized when they worked upon metal. The Greeks, Hretons, worked upon metal. The Greeks, Hretons, worked upon metal. The Greeks and small animals, eaves, subsisting on roots and small animals, eavely subsisting on roots and small animals, earth's strats that their minds become enlight, end, it is great that their minds become enlight, end, it is great and the savage hauts of the mort of the savage hauts of the mort of the savage hauts of the mort of the savage hauts of the mortal species. That mining (or money) is the more of salted and precisely between the he has each biseory of the world's progress. The tablished can be be ablessed on the savage harren of the mortal species of the mortal savage to said the savage harren monutains. We are certain of one thing: that war and peace. He has given us tools that we may he our way to distinction and fame, may he our way to distinction and fame, had seen to savage and implements of the mortal species. The describing the savage for an area of some from it trenches by shots and groot sets had since and groot sat the standards of such and some hardships and groot sets of more hardships and groot sets of more bardships and groot sets of more bardships and groot sets of more to savage for an area of some of the miner's life. There has been not over the manger in Judea's the produced at the cloud over them in the brooke. The dark hearited pack where they many in its silten to worth the manger in Judea's hight. They was no carried packs of manger and progress and tools upon their backs. There was no sard tools upon their backs. The standard or savage fore. The standard shall groot or are walking of savage fores. The oldest prospectors our secondared with alivered has prospectors on the savage fore in the production of the men beautiful to have a sail with them. They was no conquered the mew beauties of they was no conquered the mew beauties of they was What They Have Accomplished.

Very little is said about mining outside of the grand discoveries daily made within the borders of our great republic. Mining is the great civilizer of the past ages, for history plainly tells us this are the same saces here inliked when they

Give the Miners Credit.

Pajaro Tounship, Santa Oruz Co.

I take it all back. The road-runner is a pirate, and as such I praised him, entitler. Let as nearly and a robber; but he is a talented and a most, and a most is but of seided or the is a talented critter. Let as enow tell you what I saw a road-runner do on the 3d day of June, 1887. Among way other small possessions I have a very interesting the me now tell you filled to a fact, at a cross-road called Sandtord's (or Sandy's) or the sering farm, where a let is a gratly level ploud, hand, and this farm is partly level ploud, hand, hand a serie covered with partly but marsh, partly will a partly well and the serie in a far to a variety of but in a gard, and the serie in a far the form of a well and the serie in a far the ploud of a serie in a far the covered with the calle, in a quiet cove of the hill; beyond the fact in a far the control of a more in a far the fall the captiles. MECHANIGAL PROGRESS.

The fendency to substitute steel for iron for many uses has been been to a many uses have been specially noticeable for seaveral years. But it is well known that recording the steel for iron several years, but it is well known that the asked of or iron has received a decided cheek. The American Manufacturers alludes to this many purposes, "It was discovered that the steel that to receive it advantage over iron, yet, in use, the lack of fiber in the steel placed it at instance gave it advantage over iron, yet, in use, the lack of fiber in the steel placed it at its discovered that in the present state of the art of inc. In a word, for many purposes, it was a decided disadvantage when controlled with their and in the steel that in the present state of the art of also over in the steel of the steel the steel at a price that would enable the steel to compete with the iron, the use of steel, for the part, and recourse was spain had to good fibrous iron. Fibrous Steel vs. Iron.

comes an important one. Large consumers of iron and steel, especially those consumers who use these metals in places where they are subject to jars or constitution of steel for iron, because of this lack of fibrons structure, and are cause of this lack of fibrons structure, and are meris with steel. A steel with a fibrons structure, and it is now in a steel with a fibrons structure is an immediate and large demand for such with an immediate and large demand for such with an immediate and large demand for such Altogether, the subject is an important one.

#### The Causes of Boiler Explosions.

The Causes of Boiler Explosions, cently published a paper by Mr. Hochereau, formerly an artillery officer and director of the causes of the formerly an artillery officer and director of the consell of the causes of the formerly an artillery officer and director of the causes of the cames of the causes of the constructions of steam boilers, which are negative and professions of steam boilers, which considers the construction of the construction of the came of the came and calculation. After citing unnerse as mixture of more or less carbureled by drogen, he concludes as follows: I. In boilers gas produced in the boilers. After citing unnerses, and pure or carbureled by drogen, he concludes as follows: I. In boilers is an arthure of air and pure or carbureled by drogen, he concludes as follows: I. In boilers that a concludes as follows: I. In boilers as a mixture of air and pure or carbureled by drogen. S. Boilers fed with water containing organic material and calculating the came of the conclusion. After other the conclusion of captures of a sir and more or less carbureled by drogen. S. Boilers fed with water containing organic material and more or less carbureled by drogen. S. Conclusion of a capture of the process, and the concess, and the concess of a conclusion. According to the process of an arbataces, and the concess of a capturely and derived from their decembers the cargine is not running, since the gase. The requires in natrows the carbon of globular which is a that the fact on the stone of globular part of the process of a capturely depth, and foor of the former of globular actives in the cargine is not running, since the gase. The capture of the process. The cour when the big produced through the dangerous moment is that the fact and the capture of gentling up to the

to compete with the iron, the use of steel, ray many purposes, was abandoned in whole or in part, and recourse was again had to good fibrous "Off."

"Off. course, a material that can be called fibrous steel has been produced for many years, the cost of making into the cost of produced to produced for many years, the cost of making into the depended upon, the cost of making iron, and, indeed, for many purposes these steels cannot be depended upon, ing has to be used.

"Quite a number of attempts have been made to produce fibrous steels at low produce fibrous steels at low produce divine a number of attempts have been made to produce fibrous steels at low produce fibrous steels steels at low Experiments in Producing Fibrous Steel.

Excent experiments in Producing Fibrous Steel.

Recent experiments in Producing Fibrous Beteel when the urgent need of such a product, have directed the serious attention of steel-makers to the possibility of producing a fibrous steel. Messre, Morwan, also of Co., of the Dritannia Works, Middlesbrough, with the assistance of Mr. F. Howson, also of Middlesbrough, have produced by a patented process, the origin the manufacture of a superior and special quality of fibrous iron which we quote: "We claim the manufacture of a superior and special quality of fibrous iron which may be otherwise called fibrous steel by first granulating cast steel and then welding that granulating cast after a free and then welding first the manner of a puddled blim frest framulating for material and treatfrom it steel is by no means a new one. Granulating from a process has been carried a modified form of this process has been carried a modified form of this process has been carried on a several places in Eugland, but has never on a several places in Eugland, but has never out that the cost of granulating does not acceed out that the cost of granulating does not exceed as shilling a ton.

Another Process.

Another Process.

Mr. B. H. Thwaite of Liverpool and Mr. A. Stewart of Bradiord are the inventors of a process the object of which is to combine something like the Bessemer process of rapidity with the advantages of control possessed by the Siemens-Martin process. It is mamed by the inventors "The Rapid Open-Hearth Steel Street S

The sorribidity of this Mew Invention.

Description of this Mew Invention.

A TRAINED LETT HAND,—Many are the adversaring the control of the c THE TELEPHOUS.—By fixing a small mirror between the center and circumference of the disphragm of a keleptone, and reflecting from it a beam of light on a distant scale or telescope, its motion can be detected.

The American Association or Science.—
The meeting of the American Association for the Abe will be need in New York, from August 10th to August 16th. Application has been made to the principal realized companies throughout the country for reduced fares for the benefit of those desiring to attend the meeting.

TRE CROWNING GLORY OF MODERN CHEM-rater.—Prof. Bolton expresses the opinion that the crowning glory of modern chamietry is the power of producing, in the laboratory, from inorganic matter, substances identical with those extisting in the vegetable and animal kingdoms, it being known now that the same chemical laws rule animate and inanimate nature, and that any definite compound pro-nature, and that any definite omnound pro-duced in the former can be prepared by syn-duced in the former can be prepared by syn-thesis as soon as its chemical constitution has been made out.

THE PHILOSOPHY OF ICE-CREAM.—In freesting a first into a time of the cream, the oream is put first into a time of vessel and aurrounded by ice. Tim is used becased a such aurrounded by ice. This is and the orases it is a good conductor to the such intrough it was the oream is drawn through it was the cashly and absorbed into the ice. This tin vesses if a surrounding it are placed in a wood on vessel, wood being selected because it is as poor conductor, and the outside heat cannot readily pass through it to the cream. Salt is apprinted on the ice because salt has the property of melting ice, and while melting ice absorbe heat, thus making an additional draft on the vesum.

Liquin Paratriue.—Paraffine dissolves in all purper practices in alcohol and ether, if perfectly proportions in alcohol and ether, if perfectly anhydrous, forming a clear liquid, which is readered turbid by the smallest quantity of safety or aqueous alcohol. Absolute alcohol takes up only a certain quantity of paraffine two clear liquids separate quantity of paraffine oil and a saturabed solution out—pure paraffine oil and a saturabed solution of it in the alcohol. It a small quantity of latter, an immediate turbidity is produced. If sately and aqueous alcohol is brought in contact with the tistle the alcohol. It as a saturable alcohol are distinct turbidity appears. The alcohol are distinct turbidity appears. The author finds, distinct turbidity appears, of a 50 per cent alcohol, in the subdidity appears. The author finds, the subdidity appears oil freely dissolves chlorine, iodine and bromine.

Colore.—All that we know of color, its wave theory of light. Color depends upon the causes and effects, is in connection with the wave theory of light. Color depends upon the rate of the eye is in connection and the color depends to the cyc. In right waves reflected from any obtained these are about 40,000 waves to the inch, and these will librar of the eye at the rate of 447 and librar of millions of pulsations per second.

In violet there are 57,000 waves to the inch, and 699 millions of pulsations per second. The other colors have wave lights interactore, and 699 millions of pulsations per second. The other colors have wave lights interactore, are citizen these two. Color does not, there can be no appearance of a fire on a desert tanner. The chemical process called combustion going or the chemical process called combustion going the colors of the colors of the colors of the color and the color of the colors of the color of the colors of

A New Process.—The Salt Lake Tribune asys: Henry Hisching of this city has just secured a patent for a new process in the reduction of ore. The superioristy claimed for it consists in extracting silven, gold, lead, copper, zinc and arsenic from ores by applying chlorine sists in extracting silven by applying chlorine. Complete conversion of chlorides is obtained, and consequently complete extraction is, seanered. Mr. Hirsching's plant is located at the Passone smelter, where its success has been practically demonstrated on a large scale. vol., saint vol., we want to when the per ton. This mine shipped a great deal of over last summer.

The Ked Wing, in Slaughter house gulch, a mile east of Bellevue, shipped two tons that went \$80 in silver and 73 per cent lead.

These dew are offed to show that the smaller mines about here are doing some good work, and that which tells in loud tones for this mining district.

Wood River Ore Shipments.

Ar present the mines and mills of Oandelaris employ about 125 men. The Mount an oper-and Georgine are the only large mines in oper-ation, but they are taking out plenty of good ore. Many smaller mines are being worked, making a living for their owners and a little over.

fore, surgical or otherwise, to dislodge it, if this dilemma common sense came to the resous. Etnus I himself devised an apparatus to which he was strapped head downward, keeping his mouth open, when, to his inexpressible relief, the coin dropped from its daugerous position the coin dropped from the floor. A sword-swallower, who once lost a beyonet in his throat during one of his public performances, resorbed to similar means for reconvering it, and was sensitial means for reconvering it, and was

THE CHEAPEST DISIURECTANT KNOWN, which fulfills its intent, is made by dissolving half a dram of nitrate of lead in a pint of boiling water, then dissolve two drams of common salt in eight or ten quarts of water. When both are thoroughly dissolved, pour the two mixtures together, and when the sediment has estiled, you have a pail of clear fluid, which is the estrustant are a solution of the chind, which is the estructurated solution of the chind, and what had better of the nitrate will make several barrels pound of the nitrate will make several barrels of the liquid.

To Make a Flamor Johnt that won't leak nor burn on steam pipes, mix two parts nor burn out on steam pipes, mix two parts spread on the flange evenly, and cut a liner of gance wife.—like mosquito-net wire—and lay not the putty, of course cutling out the proper holes; then bring the flanges "isit," put in the bolts and turn the nuts on evenly. For a permanent joint this is A No. 1.

#### GOOD MEALTH,

#### Hints for the Sickroom.

The sickroom should have plenty of fresh air.

The sickroom should have plenty of fresh air.

This is especially necessary in cases of fevers.

An inch at the top of a window and an inch at the bottom may be allowed even in cold weather.

Sick persons will not take cold any quicker than well ones, if the draught does not strike them.

Where there are windows in the opposite sides there there there are with the opposite sides from the season of a room the task of ventilation is essien, but the be task of ventilation take over the patient up and let ventilation take place, at least three times a day. Keep the place, at least three times a day. Keep the opposite the patient up and let ventilation take of the patient when the settle the control of the control of the patient of any least three in the city to the off the optical will enable one to give it full off the optical of the patient will enable one to give it full world state.

off the chill will enable one to give it full ventilation.

With sick and well folks the greatest danwith sick and well folks in getting up in the ger from taking cold is in getting up in the morning. The circulation is there aluggish and exposure tells with double effect.

In most diseases there is much less heat gentrated in the body than in health, therefore hoe emperature of every sick person should be noted. If it is inclined to run down, raise it noted. If it is inclined to run down, raise it has many and the season of water bothers. The period of greatest decline is apt to be in the morning, and on till 10 or 11 o'clock.

Discrete the contract of the series of the s

In a force our negative for the person.

In a found feel very happy should this note be that dreadful disease. Under God, I have to thank dreadful disease. Under God, I have to thank Mra. Ocok for being slive today. Yours respectfully,

Rand, Maus, Hauadian Islands, June, 1887.

A little over 5 years ago my husband sent a Mr. Augustine Enos, a Portuguese merchant of Wr. Augustine Enos, a Portuguese merchant of Wailuku, Mani, H. I., to Mre. Cook, for treathact of a cancer which he had in his nose. It hocolulu, but had returned every time. Mre. Cook cured him, and the scar left is barely perceptible. Mr. Enos told me of a friend of his optible. Mr. Enos told me of a friend of his optible. Mr. Enos told me of a friend of his in Honolulu whom Mrs. Cook had cured. I left my cancer with Mrs. Cook, which she keeps in a bottle for inspection.

Another Case.

Agn Cancer be Cured?

In reply we refer to the following, and many other similar cases heretolore published:

Entrors Press:—In durhberance of your priseworthy efforts in behalf of suffering humanity. I send you the following report of my own presence the accounted on tor some years, and had been troubled their went for a year, but as I had never seen one, it never occurred to me that I was troubled that way to cocurred to me that I was troubled that way. One day, hearing Mrs. Cook tell of her success of cure to me that I was troubled that way. One day, hearing Mrs. Cook tell of her success and the sear, and the success and the success of the sear, and the success of the sear, he success and the success of the search of Montgomery of the search of Montgomery seed by. Tolsard and Dr. McLean, at their to office on the southwest corner of Montgomery and Morebrant streets. That was in Pacember, and the collect on the southwest corner of Montgomery 187S. They pronounced it cances and washed me to 187S. They pronounced it cances and washed in me to 18 sens. I want also seed Dr. Yoland and Dr. McLean, at their the next day. I then went with the brille the next day. I then would guarantee a cure. The replied that he could not be about a seed of the the same result. They pronounced it cance near Market.

It saked Dr. Yoland if he would guarantee a cure. They could be could not be but that it my like was of any value to my family, the operation would prolong it about hvy years. In Jane that, it has been of the trubing that they shall be replied that the sould not be but that it may. It shall be could not by but then the same to a transfer, and not the 6th of July the cancer came out, and by the flet of they cancer came out, and by the late the seem of any said and by the late of sever my said and by the late is the cure.

Can Cancer be Cured?

and never whisper with the physician or friends in the sickroom.

All appearance of heate is painful to the sickroom.

All appearance of heate is painful to the sickroom, bow to do them, but do them quietly and with out free said hurry. A patient will pick out and rely on a cool-headed, quiet, prompt per out fues and hurry. A patient will pick out and rely on a cool-headed, quiet, prompt per on which a sick person when he is doing anything, nor interrupt him when speaking, nor interrupt him when speaking. But the sick person hies.

Never lean against, sit upon, or shake the bed sak it; then read what they crave, and do it selection. Alever lead to the sick, except when they sak it; then read what they crave, and do it sitkle variety to the croom by occasionally changing things. If dowers are craved, except when they get desire for something solds person or avect perfumes.

Orevel, her intitle tood at a time, but give often, if they get a desire for something solds person. If they get a desire for something solds better by giving them a little tee or light broth.

Never leave in meal to meal. Sight of wepting patient's patient's morties temptingly prepared and served, and craving is morties then with care.

Sold with care. Sometimes the ordering short is a little of whatever is craved, unless the physician forbids. Sometimes the ordering short is old whatever is craved, unless the physician forbids. Sometimes the ordering is mortieved in the bed get desire of gets of patient of the bed get demy or fourl. Don't fill bid, then you can reture to graving is mortieve and dry. Change the ordering of sometimes the ordering short of sear and dry. Change the ordering of sometimes the ordering of sometimes the ordering of sometimes the ordering of sometimes the contains the section of the bed get damp or fourl. It will probably claims will the mice of river claims will the mole expected for mining. The claims will be worked expeditionally, to accomplish them out, shihough it may be possible to complish them out, shihough it may be possible to complish them out, shihough it may be possible to complish them out, shihough it may be possible to complish them out, shihough it may be possible to complish them out, shihough it may be possible to continue them out, shihough it may be possible to continue them out, shihough it may be possible to continue them out, shihough it may be possible to continue them out, shihough it may be supposed to the tendent of the made on the heavy cost of the underveture and the made on the heavy cost of the underveture and the middle the made on the heavy cost of the underveture and the made on the heavy cost of the underveture and the made on the heavy cost of the underveture and the made on the heavy cost of the underveture and the made on the heavy cost of the underveture and the made on the heavy cost of the underveture and the made on the heavy cost of the underveture and the made on the heavy cost of the underveture and the made of the underveture and th

PACKER LAKE MINE.—Twituns, Aug., 5: Work property on the tunnel here is being pushed as the rate of the tunnel here is being pushed as the rate of the ground frame property is arriving at the San Bronstoon. The machinery is arriving at the San Francisco. The machinery is arriving at the superintend erecting the mill. It will seem good to hear muste and George Black went up, there Tuesday to superintend erecting the mill. It will seem good to hear the muste of stamps up that way. A rich hear in the muste of stamps up that way. A rich hear in the Primrose Works. Three Gasims of 1500 near the Primrose Works. Three crecorded. A staff that sheem sumk to feet, and therein is shown a staff that been sumk to feet, and therein is shown a staff that been sumk to feet, and therein is shown a staff that we have the down from the duality westeries's cleanup for July was \$26,000.

Ventura.

California lodes are showing up fine. The shalf on the mineral generally occurs in large with and richness. A shipment to the Prescot made feeper all the time, and the ledge keeper up it is being worked of 337 seeds and except to 18,000 for the or the location of samples, and earell asmples.

To RESUME OPERATIONS.—Attangements have controlled the orations of support mines at Sam Pedro, Sante copper, it to 17 per cont. The olde at bottom of shalf the orations of states and enter thouse the effect of the present of the lingants. All, Chitechear copper, it to 17 per cont. The clote at bottom of shalf a copper, it to 17 per cont. The oration of shalf a copper, it to 17 per cont. The clote at bottom of shalf a copper, it is stored the will at once the copper, and other points. We shalf the mineral, ranging from 8 to 20 feet a copper, it as a done to the singest ever found in thickness, and said to run from 20 to 50 per cent of once were shipped from Telluride and the proper of the weighted to promise. West found the miners of the claim worth 5500c. During the week ending Monday, in Jonout 2000 for every ablance of coke Co. is running five cold & Coke Co. is running five cold of coke Co. is running five cold

PEAT BED.—Froncey, July 31: It is stated that as extensive peat bed has been discovered in Lake Township, Sully county, ten miles northeast of Township, Sully county, ten miles northeast of Township, Sully county, ten miles northeast of treat of about to the Medicine Valley. The peat covers a Wintes, Mittles And SMELTERS.—A so-stamp mill is about to be put up on the Mineral Hill mine, is about to be put up on the Mineral Hill mine, sould be the put to the Mineral Hill mine, so the gold-bearing cement property near Roovershille. Excellent prospects, it is said, have been obtained throughout the workings, and obtain proper masseement it the enterprise will, no doubt, turning successfully. The race of the Hadson mine beisting propert an earth of the Stamps of the Standod Euroning successfully, as it is each as bas caved in from the old open cut, and is not exmining successfully, as it is each as bas caved in from the old open cut, and is not exmining successfully, and canner of the standod of open cut, and is not expected to run rey plight, as it is each as bas caved in from the old open cut, and is not exmining successfully, work of breaking or end of the successfully in the cut will be commenced. The recent find on in the ground of the successfully in the cut will be commenced. The recent find on proper promise of soon developing into a splendid body of rich ore.

THE MINNIE MOORE.—Wood River Times, Aug. 6: This unine has recently introduced many modern improvements. A new 60-horse power engine has been placed, and started off successfully yespeced with fine Brussels carpet. The electric light is used throughout the works, and everything has been placed in a condition for easy and proflable been placed in a condition for easy and proflable working.

working.

The LAMOAN MINE—This silver-producer is a most possed working.

The LAMOAN MINE—This silver-producer is now in most complete trim. The deadwork bas all now in most complete trim. The deadwork bas all he most complete trim. The deadwork bas all be employed in extracting the ore. It is true find the metal of the mine may become again a dividend-paying so the mine may become again a dividend-paying one. This is what we want—mines to pay dividends as well as wages. When this is the case, mining one. This to work the month of the mining wery expert who visite is possed well of it. To: be concurringing about the gold belt, "and a mining went man to a Nimer reporter yesterday! "and a mining surery expert who visite is togets well of it. To: be surery expert who visite is togets well of it. To: be surery expert who visite is togets well of it. To: do not birth to to high for the amount of development work; but that does not signify much. The most important thing to us is that all spree that we have shown the force it was the bave shown the gold on the product of development of the many mines there, and that all that is wanted to show them up is more work."

### .ANATHOM

VARIOUS LOCALITES.—Inter-Mountain, Aug. 7: At Libby creek the placer clsims are paying \$3 to \$9 per day, and a whole lot of ground has been taken that prospects well, but has not yet been worked. There will be a big quartz camp over there, but will lake about a year to develop. There are now something like too people in the camp, which is reached by a pretty rough trail. The Wowhing about a year to develop. The lot working about 50 men, and it is generally undermore that a large increase in the plant will be made in a short time. The lote on which the company is now operating has been one of the most steadily for working, will yield still beiter. There is a good deal of setting will yield still beiter. There is a good deal of setting will yield still beiter. There is a good deal of setting will yield still beiter. There is a good which will yield still beiter. There is a good will yield still be will yield yield will be will yield yield

MINING MOTES.—Silver City Augustion mining or working.

morthy of special mention: Dewey & Co.'s Scientific Press U. S. and Foreign Patent Agency, the following are Agnordt benistdo yltneser staetsq edt gaomA

AUTOMATIC GAS-PRESSURE REGULATOR.

James W. Haggerty, S. F., Oal., assignor to Johas, C. Morris of agme place. No. 367,618.

Dated Aug. S., 1887. This device is especially applicable to liquide such as been, in which it applicable to retain a certain amount of carry bonic acid gas, and to maintain a regular pressure bonic acid gas, and to maintain a regular pressure on exident pressure is being gradually diminished by being drawn off. The device consists of a chamber into which the pass is delivered under high pressure it changes a peculiar valve, and a mechanism reduced before it enteres the cask or receptacle, which the chamber by which this pressure is modey which this pressure is reduced before it enteres and a work of the person of the place of the pressure in the cask reaches a certain point and pressure in the cask reaches a certain point and pressure in the cask reaches a certain point and smooth of the pressure in the cask reaches a certain point and smooth of the pressure in the cask reaches a certain point and street search in Nev. No. 367,580. Dated Ang. S. 1887.

This inventor belongs to that class of devices a part of the sars whether or lease of devices at the perior and a present or inventor and a pressure is the pressure in the cast of the sars are to a part of the sars and the pressure in the cast of the sars and the pressure in the cast of the sars are present of the sars are present of the sars are present and a present or and a present of the sars are present and a present of the sars are a part of the sars are a present of the sar AUTOMATIC GAS-PRESSURE REGULATOR,-

Been Water Heathou Attachment for Dollers, Joseph H. Mathews, Berkeley, Cal. No. 367,647. Dated Aug. 2, 1887. This attachment, which is of the most simple character, consists of a pipe connected with the water feed and extending which is the conduction character feed and extending within the water space back. As a point near the combustion chamber at the tea spoint near the combustion chamber at the tea point near the combustion chamber at the tea point near the combustion chamber at the tea point near the combustion chamber at the space between the tube-boxes, and thence the space between the tube-boxes, and thence and tare below the level of the water in the boiler. The evident object in conducting the pipe in this course is to carry it in close in the boiler. The evident object in conducting the pipe in this course is the carry it in close to the conference of the furnace, and, by reason of this location, the feed-water is thoroughly bested and the water-bottom of the boiler will be at as high a temperature as that in the top, therefore a suid the water-bottom of the conference as high a temperature as that in the top, therefore a suid the water-bottom of the conference as high a temperature as that in the top, therefore a suid the water-bottom and contracted and the water-bottom and contracted the conference and the conference and the conference and the contracted and the water-bottom and contracted the conference of the con FEED WATER HEATING ATTACHMENT FOR

OF VANNING MACHINE. CONCENTRATOR OBE THE FRUE

Room 7, No. 109 California Street,

(2220'00' FIVE HUNDRED AND FIFTY DOLLARS

The present improved form of the celebrated "Triumer" Ore Concentrator possesses many advantages over any other style of Vanners, Vanning Machines, or Concentrators, yet introduced to the notice of mining men. These advantages consist in the superior features which enter into their construction, and facilitate their operation.

They are constructed in the best manner; their transe being of iron, insures their solidity, durability, and perfect steadiness of motion when operated. They are built as compactly as their reduced, and occupy less mill room when sets up.

An important improvement has recently been introduced into their construction, which consists of a Riterix Table; placed in front of and which the false for the discharge from the feed and amalgan bowl. The improvement is in the cieptor of the almost and the discharge from the feed and analgan bowl. The improvement is in the recently been introduced into their construction, which consists of a Riterix Table; placed in front of and which the by the longitudinal nucleon of the slakeling frame to which the stable is attached. We have at hand many testimonials, from well-known Superintendents of mines in different mining districts to the United States, bearing evidence of the efficiency and superiority of this form of Concentrator, and we shall be placed to send Circulars covering such letters of settimony, and, as well, directions for setting up and operating these machines, and are ready to quote special prices for any considerable order.

Working Surface of a Pulley.

The search of the search of a Pulley, which we shall be considered to the search of th machine can be so constructed as to be driven at a much higher speed than was employed in this first one. Such a machine will be of great value in making changes of gange on roads. The machine is very simple and inexpensive in construction, and can be placed upon any ordinary railroad track.

It will dry soon, all other dry apply poiled linesed oil with a sel or one paint-brush, in a few hours it will be found any on for a few days. When it needs oleaning, use hot suds.

INCENDIARY BIRDS,—A new complaint bas in the complaint has

Very little attention has been paid in bieg meen between the country to a sertain class of disorders observed among brass-workers. The beet known class of symptoms is that constituting what is called to symptoms is that constituting what is called to symptoms is that constituting what is called to the tunes of the mess. The metalic copper and then by a distinct chill, with headache, and then by a distinct chill the two days, but is libable to a relapse, the nown of Birmingham in 1853, and stein by Hirt. Brass is an alloy of copper and sinc, I have a described by Green. It has brass-counders ague was an acute poincing with a function, because it is not be. Greenbow believed, therefore, that brass-workers from the process of making, the sinc deflagrares and sinc. I have a distinct trace meletar. Heached, Delice in that brass-workers acute of the mingled from the trace was an acute poincing with a function. But the trace workers in the served among tine on the neck of the sum of the crown and on the neck being that brass-workers and states his and states his and states his the sum who are copper or brase-workers and states his being that brase route copper to the action of the served manners in a slightly hackers are of the copper or bare or or brase-workers are often copper or brase-workers are observed. These often points to an absorption of copper metality in the workmen, and tavor the view that the metaling the in in large part at least, to this metali.

had a the more of the solid of JUGEOWING MAILS.—The British Medical Journal says: Dr. Misi has need tennin for Journal says: Dr. Misi has need tennin for ingrowing nails, and does not find it necessary to enjoin reset, a concentrated southston—an onnee of fresh tennic acid dissolved in six dischms of pure water, with gentle heat—is used by painting the irritated soft parts twice a day. Two ceases recently had no pain or all lamoness after the first application, and went shour their work immediately, which they could not do before. The painting with the tould not do before. The painting with the formin is to be continued natil the nail has grown to its proper length and breadth. No other treatment was necessary.

Value or Lime-Water and Milk.—Medical and other professional men often press down from their insbility to keeps a regular time for meals. An eminent doctor says: "Being often out for meals have meals, and eminent doctor says: "Being often out for meary hours, and becoming too oxy basels, and seeks a full meal when at length able to get it, I conceived a plan which answered admirably adopted. I provided myself with a small bottle of lime-water, which I add to milk when the mixture in my pocket. A water biscouit the mixture in my pocket. A water biscouit the mixture in my pocket. A water biscouit they mill keep a man harmless on a long tast, and enable him to digest a meal when he can obtain it."

CREAM—ITS VALUE AND UES.—In an interceting article on cream, its value and ase, Prof.
Arnold of Cornell University says: The
superiority of cream over butter or any other
great mobility between its particles, premitting
in a liquid form, but in a condition allowing of
great mobility between its particles, permitting
fibe gastrio juice to mix with it in the most perstomath on the individual contains, thereby adding digestion.
Its behavior is quite different in this respect
from that of butter and other pure fasts. As
soon as they become melted they grease over
the other contents of the stomach, obstructing,
in a messure, the contact of gastrio juice, and
bindering, rather than hastening, the progress
of their digestion.
Value or Liner bastening, the progress
of their digestion.
Value or Liner-Water and Milke.—Medi-

### Notices of Recent Patents.

Among the patents recently obtained through Dewey & Co.'s Southwritte Press U. S. and Foreign Patent Agency, the following are workhy of special mention:

Macazing Guy.—Howard Carr, S. F., as-

aguor to the vinchester Acepaching Anna Co. 363,130. Dated Aug. 9, 1887. The invention in this gun consists mainly in the carrier by which the carrier is accompanient of the gun. This carrier is so constructed the parties are craneferred from the magazine to the gun. This carrier is accomstructed that carrier is accompanient. The improvement may be used in the gun without obsarge of any portion of the mechanism. The improvement may be used in the gun without obsarge of any portion of the guns of any description, and while carbridges of various lengths may be used in the same carrier-block and loading mechanism the same carrier-block and loading mechanism are employed. signor to the Winchester Repeating Arms Co.

Jamenne, Jone, Ust. No. 367, 1918. Dated Ang. 9, 1887, This system comprises a number of centrifugal pumps arranged in verticeal series, and devices in connection therewith, such as a peculiar construction of the pumps themselves and a novel vertical system. The patentied by this same inventor, as in the prefectly practical system. The will present a perfectly practical system. The object of the invention is the provision of a wisten whereby waster may be raised to say high, either from the bottom of a deep well or the shaft of a mine, or to the top of a suitable the construction of a mine, or to the top of a suitable waster works. CENTRIFUCAL PUMP SYSTEM. — Isaac P. Lambing, Ione, Cal. No. 367,918, Dated Aug.

Puritying and Preserving Beverances, S. F., Comps and Frederick A. Weise, S. F., Cal. No. 367,938. Dated A. Weise, 9, 1887. The object of this invention is to preserve such beverages as are likely to degenerate during the beverages of their of their use, by reserve into which the vessel, into which the beverage of the superestrainty and especially of lager, which raptures of beer, and especially of lager, which raptures of the space left, by drawing off the filling ton preserving the bestoner once tapped. The means of the vessel, with a foam-generating company of the company of the space of the sir is excluded.

Brake.—Henry Dewey, Plainsburg, assignor to Daniel Best of San Leandro, Cal. No. 367, to Daniel Best of San Leandro, Cal. No. 367, PURIFYING AND PRESERVING BEYERAGES.

965. Dated Aug. 9, 1887. This brake is parbefor and breachers. In those macohines it has
ere and breachers. In those macohines it has
been necessary to employ large teams of suimals
occurs in such a team it is impossible for the
driver to control them. But the powerful
driver to control them are the driver to so
control the team. It is applied to the main
driving-wheel of the machine, the strape
states of the frame of the machine, the strape
states of the frame of the machine, the strape
states of the frame of the machine, the strape
with the frame of the machine, the strape
states of the frame of the machine, the strape
states of the frame of the machine, the strape
states of the frame of the machine, the strape
states of the frame of the machine, the strape
states of the frame of the machine, the strape
states of the frame which are operated by the
driver. to Daniel Best of San Leandro, Cal. No. 367,-965. Dated Aug. 9, 1887. This brake is par-

The object of this invention is to provide a centrifugal pump in which there as no friction on the outer rim of the driver, and whose operation and power are purely centrifugal. It consists of an outer annular hollow receiving OENTEIFUGEL PUMP. —Isaac P. Lambing, Ione, Cal. No. 367,919. Dated Aug. 9, 1887.

## Bullion Shipments.

Business Risks in Mining.

We remarked briefly not long aince on the certainty with which mining results can now be forecast compared with those blast attend most other pursuits. These remarks gather force from the reports that come to hand daily of failure in one industry and another the whole growing regions or a partial failure of the wheat growing regions or a partial failure of the wheat praving regions or a partial failure of the wheat praving regions or a partial failure of the wheat particular to the root pright has fallen on the cotton plant, or the intervent over steared as in the State of New York, is dight bas fallen on the cotton plant, or the intervent or the hoper ountries, as in the State of New York, is done dight of California, and other dressesses among the expension of similar peats. There is not conference of the white and other dressesses among the sune and other dressesses among the sune and other dressesses among the sune of some one of the sune one that of the sune californial sagents of loss and devastation the products of agents of loss and devastation the products of agents of loss and devastation the products of destroyed.

"Not so with mining tor the precious metals, of searroyed."

"Not so with mining tor the precious metals."

"Not so with mining tor the precious metals."

"Not so with mining tor the precious metals." We remarked briefly not long since on the

agents of loss and devastation the products of many industries are largely diminished or wholly destroyed.

Mot so with mining for the precious metals.

There may be disappointment and loss in individual cases, but they do not extend to entire and silver mines will, as a whole, be what was expected. Look to the Pacific Coast, Mexico, South America, Marietials, Siberia, and it is will be within a fraction of what was predicted at the aggregate output at the end of the year will, as be peginning, and so it will be within a fraction of what was predicted at the eaggregate output at it will be nearly as a business. And long as mining is pursued as a business, and long as mining is pursued as a business. And contact year, and the next, and independent of this output will be just as cortain it will bring the producer just what he had contact out the promple in counted upon, nor will he have any trouble in faceige funnant efforts are as a few probably in the precious metals of ourse, attended with the precious metals on the sell in the lates work, and in the failure of pay ore. These oranting employment of most sell in winting to the precious metals consists in the cost of lead to the precious metals consists in the cost of lead of the mining as in or yearle or the precious metals one of pay ore. These cannot work, and in the failure of pay ore. These cannot work, and in the failure of pay ore. These cannot work, and in the failure of pay ore, though one of sold indigment are exercised, be resulted to a minimum.—Denses, they can be doned to a minimum,—Dense of the doned to a minimum,—Dense of the processes of experience, they can, where one of the orange of the summend of the contribution of the orange of the result of the processes of experience, they can, where one of the orange of the summend o

American Barrel Machinery in Educory in Educory in Peice, is said to be a large barrel factory in Breslau, Silesia, which is entirely fibted out with American-made machinery, the value of which is nearly \$500. There is also, in the same factory, one band-saw (Am.), one borring machine, one concave saw and one circular saw. This merely illustrates how American woodworking machinery is finding its way into distrant and almost unbeated in markets by its exvorbing machinery is finding its way into distrant and almost unbeated in markets by its extensions. The product of the above factory is and with the sid of the above factory is and with the sid of the above machinery about 120 are turned out every 10 hours, which are sold at \$6.66 each.

## Mining Spare Market.

Mining shares continue from and steady, the week, the holders of shares seem confident and should the week. The holders of shares seem confident and show little disposition to seefl, none parting with their holdings at a sacrifice unless compelled to do so, An early state as a sacrifice nuless compelled to do so. An early Comstocks and other standard stocks. The mining Comstocks and other standard stocks. The mining contest of the week a tendency to shrink-sioned by the failure of the list who st syndicate. Toward the close of the week a tendency to shrink-sioned by the failure of the list who st summortean to be supported to the close of the marking was a supported to the constock lode and stocks. But this did not affect the tone of the minportean conference of the marking considered, prices can favorable. Bother mining considered, prices can hardly be said to be unduly inflated,

## MECHANIGAL PROGRESS.

Tempering Taps and Other Small Tools.

CORRUCATES ROLLED STEEL TIEES.—An inBullyecked to rapid oxidation.
CORRUCATES ROLLED STEEL TIEES.—An ingenious and useful application of the principles
of corrugation has been made by Mr. William
Tox of the Leedes Forge Company, Leede, England. Mr. Fox has applied corrugation to the
manner. By the peculiar path described by the
tires of wheels for road traffic in a very simple
corrugations when revolving, the wheels are pretires of wheels for road traffic in a very simple
corrugations when revolving, the wheels are presolvented by the sides of the rails and they
also serve to effectually mount the inequalities
corrugations as the relations of the rails and they
also serve to effectually mount the inequality worn
diving up to it, which latter is frequently worn
beauth below the edges of the rails and they
all vehicles are liable to slide in crossing or
diving on or about tram lines, the effect being
to injure the wheels or seriously twist the cardiving on or about tram lines, no matter the
asile and dangerous. Fox's system of corrugated
triege, so as to render driving on such routes undriving on or about tram lines, no marter as
asile and dangerous. Fox's system of corrugated
driving on or about tram lines, no marter as
asile and aspectory be detected. The tree are as
any month and asy that the presence of the car
riske, so as to render driving to prerisk of scrident in driving they prestep plain tires, and besides obviseing the
wooden fellose of the wheels from being damrisk of scrident in driving they proceed by the curbatones when drawing up or
training corners.

THE YANKEE GOOVER is the name of an ingentorial describity presently patented, and solves
to decore the decorety the curbatones when drawing no vertorial decorety the curbatones when drawing on solves
to decore the decorety as the care as the contracts of the care
the decorety of the curbatones when drawing no vertorial decorety the curbatones by the name of an ingen-Tempering Tapa and other Small recording to the record of the series of Acceptance of the property of the process of the passes of the process of the pro steel, which is a sid to require no hardening, steel, which is said to require no hardening. It is composed of soft iron, nickel, marganese and terro-oyanide of possesium. The steel is and terro-oyanide of possesium. The steel is produced at one melting. After the iron and nickel are melting. After the winductes or its oxide, rogether with the fetro-oyanide of possesium, which the marganese with the other ingredients are melting and the reaction is taking for another ingredients are melting for a short time longer one pape, the mass is estirred with a red-hot rod of graphite, whereupon the short time longer continued. The alloy is then to be well melted and the stirring for a short time longer continued. The alloy is then to be well melted the melting for a short time longer continued. The alloy is then to be well melted even, being observed to paint the molds with even, being observed to paint the molds with to have them as free from all water of amonts, and to have them as from all as possible.

GHEAP ALTUMIUM.—Much attention is being given to improvement in the manufacture of all mine to improvement in the manufacture of all mine to improvement in the manufacture of all mine to improvement in the manufacture of the arts and every-day uses of life for which it is so peculiarly applicable. Mr. James Mace of the Gorlety of Chemical Industry in which is the Gorlety of Chemical Industry in which he contry amounted process for manufacturing coulty amounted process for manufacturing sodium and potassium cheapily. With caustic sodium and potassium cheapily. With caustic sodium and potassium cheapily. With caustic field and materials. With sodium costs about 25 cents a pound, allowing I7 cents for alloming in alloming ones and university of the metallic sodium costs and materials. With sodium at this price allominum can probably be put on the market at \$350. Speciario de grates de consequence is a sterior of the control of protection of the control of special of the control of Mechanical Improvements. THE SCIENCE OF THE BASENAL CHEVE.

THE SCIENCE OF THE BASENAL CHEVE.

When a ball (or in fact any missile) is advancing the practicity of it is a small aggregation of compressed air. (In pagingly through the air, there is formed in tront of it is amall aggregation of compressed air. (In pagingly through the air, that the compressed air in tront of an advancing cannon-ball best pagingly through the air is compressed air in tront of an advancing cannon-ball best pagingly and a state of the air is conical—or rather visible—by instantance properties of the ball best and therefore it cestes the progress of the ball state of the control spin of compression and therefore it cestes the progress of the ball state of the control spin of compression and therefore it cestes the progress of the ball spin of compression air cannot escape so readily as the case we have to consider, where the spin is advancing side of the spin is advancing side of the spin is accounted. The cannot escape so readily as it is decape amore readily than it would but for the advance of the cushion of sir spin is a spin ing the compression of compressed air formed by the action of compressed air cannot escape so readily as it toward that and removed from the other side of the spin is spin ing the counters and the cestion of the same thing the mass the other side. The same thing the mass half and the other side of the ball is advanced to the right of the the cushion of compression of massisms as a spin as the other. The same this is actorated from the region of the ball is advancing is not opposed on the other, the ball is advancing is not opposed on the other. The ball is advancing is not opposed on the other, the ball is advancing is not opposed on the other. SCIENTIFIC PROGRESS.

**Pistricts?** Does Danger Thresten the Oil

placed several inches from the wall lest the building should take fire. The members might the observed carefully touching the pipes with their hands, and wondering why they did not feel warm. It is just as absurd to suppose that in the unavoidable absence of oxygen the fire can run down the smaller shaft, pass through the reservoir, and reach the larger boring. Should there be a junction between the wells, at a higher level than that at which the oil is eserceted, there would still be no danger, as the inability of the flames to extend further downward, owning to the rapid production of carbonic acid, gas, would effectually guard against any extensive communication of the flames. danger be as well known to scientists as the danger, be as well known to scientists as the danger be as well known to scientists as the slarmed correspondent asserts (he even property of serior of Congress to sake to said an extra session of Congress to take some action in the matter), it is strange that his reason, viz., the one well with dataght, pulled down into the earth the burning gas of a smaller well, resulting thus in explosion, should have been overlooked by an estimate the same as reminder of the time when Villiam Murdock made his discovery of comuse it is a reminder of the time when Villiam Murdock made his discovery of comparities are the House of Commons, the architect into the House of Commons, the architect into the House of Commons, the architect into the House of Commons, the architect pipes, and therefore insisted on their being placed several inches from the wall lest the placed several inches from The members might be obtained to the members might to be a building should take fire. The members might is a point of the property of parentyle propertyless with the construction of the members might to be a purifical propertyle and the propertyless and the propertyless and the propertyless and the members might to be a purifical propertyless and the propertyless and the propertyless and the propertyless and the members might to be a propertyless and the propertyless and the propertyless and the members and the propertyless and the members and the propertyless are propertyless and the propertyless and t a correspondent of the Cincinnati Commercial to those regions of our country which are occupied by gas wells. Briefly, his argument is this: Two hundred years ago there was just anoh a craze in China as we have in this country to-day. Wells were sunk in large and numbers; there were many of them large and quite near to each other. A gas explosion or curred that killed several millions and destroyed a large district. Lake Foo Chang, a large infared sea, at present cocupies the cavity. If this land sea, at present cocupies the cavity. If this danger be as well known to scientists as the danger be as well known to scientists as the Overwhelming disaster has been predicted by a correspondent of the Cincinnati Commercial

The Philosophy of the Kerosene Lamp.

The question is often asked: "Whence comes the unpleasant small samp?" A comes the unpleasant small true plants; "A comes the unpleasant small from the ask of the best oil that is decembered by the best oil that is decembered by the best oil that is under you can produce a gas in your house that is under you can produce a gas in your house that is under you can produce a gas in your house that is under you can produce a gas in your house that is under the state of the samples of is sold in perceptible door from any quality of il sold in perceptible door from any quality of il sold in the market. But there is no compute, and there is also a danger the wiek, when you light a lamb and it. This is done for economy in most instead and it. This is done for economy in most instead the wiek, with this supply established, there is any done in the same will not burned being volatilized through the stablished of oil its established through the stablished, we thus white to its decrease of lourning surface, the supply of oil contract of the copy of oil oil restablished we wiek, with this supply established, we thus with this supply established, we thus only the surface of constitution in the compact of the originary products of constitution in the farm of oil its established through the stried of the wiek, and a very little praction of the originary products of constitution, most of the rooper proper proportion of allow into the surface, in my opinion, is the chainsey, or is blown into it, as axplosions in the office, in one of the explosions of it can be will, it and the the the the true of the contract of the originary opinion, as and easiest and the contract of the originary opinion, as the casults of the will, the will the will the surface of the contract of the contra

THE CHEMICAL COMPOSITION OF MAN,—From a chemical point of view, man is composed of a chemical point of view, man is composed of 13 clements, of which the are gases and sight position of a man of the average weight of 154 pounds, we will find that he is composed in targe part of oxygen, which is man weighting large part of oxygen, which is a sease of oxygen, would see the own state of oxygen, which is at oxidinary temperature, teme compression. In fact, The hydrogen is would axceed 380 cubic feet, The hydrogen is much less in quantity, there being less than 15 pounds, but which, in a free state, would occupy a volume of 2800 cubic feet. The three cupy a volume of 1800 cubic feet. The three over a volume of 1800 cubic feet. The three of a volume of 1800 cubic feet. The three of your volume of 1800 cubic feet. The three of 1800 cubic feet. The three of 1800 cubic feet. The three of 1800 cubic feet.

A Wear O. A. A Birmingham form in making an an an arm in a naking ham is an a factor in the best an oar in which the blade is made from the best sheet steel, highly tempered. It is put forward as being much stronger than the ordinary wooden one, and sanot be broken without unrunning nearly the whole length of the blade and forming a sockbone of great strength. The and forming a backbone of great strength. The water clean wooden ones, enters and leaves the water clean wooden ones, enters and leaves the water clean any spruce, or sah, and it broken can be readily if yellowed.

THE YANKEE COOPER is the name of an ingenious device, recently peteried, which solves only only device frues hoope on tight be problem of "How to drive trues hoope on tight be done reputly and well, as extracts the manufacturer being thereby effected and the manufacturer being thereby effected and the manifest agreem of operating the machine will be readily of the machine will be readily on glancing at the cut. The driven understood on glancing at the cut. The driven and bear upon the hoop in 12 places to prevent the hoop from being driven on to the borrel and bear upon the hoop in 12 places to prevent the act of the iron in the hoop read as fromly as the strength of the iron in the hoop will allow. The devices for operating the driving at the machine, as well as to bring then the beart upon the hoops, are such that the work is performed and the machine, as well as to bring them to bear upon the hoops, are such that the work is performed and the predators. The machine is performed and the machine, as well as to bring them to bear the machine, as the strength of the interest of the proper formed with great repidity. The machine well allow. The machine weight seekers are such that the work is performed and the great repidity. The machine weight solve the beart of the proper formed with great repidity. The machine weight solve the Buffalo, N. Y. The machine weights 3000 ibs.

A TEST FOR MAINERIA,—A loving father who, at a summer resort last season, had left behind. The and left behind at a summer resort last season, had left behind father behind so that more as a summer resort last season, had left behind so the same as a summer where as if he had shot my little ones. "Sa, dear sir, but you, the gractian, ought to have been armed and equipped against on the little and equipped against a brother and another control of the season of the same should object. Take in the risk of each streem spirity of cases prewent the risk of each control object. Take in made before a landlord could object. Take in the dressing-bag an ounce vial of saturated so had dressing-bag an ounce vial of saturated so the dressing-bag an ounce vial of saturate and the dressing had been supplied. It it turns brown in an hour, it is, broadly speaking, until the drink; if not, it is, broadly speaking, until to ounty holds where the is supplied, it is then shown a county holds where a last season is contained to ones. In the season is confined to ouse, and near the water supply, take next train to a point farther on. These matters should force some last when their neglect should force some on one's presonal attention, quite some last the contained to occasion. These masters should force some on one's presonal attention, quite some of the sunch as the undertaker's bills that occasionally lollow their neglect.—American Magazine. By Secondary.

How Love Overcity. Protects.—By a vote of the German Parliament a commission was created in 1853 to consider and report upon the opiections to expend so consider and report vecination. This commission was a large one, vaccination. The following are some of the and included three prominent opponents of the conclusions given in its report as stated in the conclusions given in its report as stated in the tip of the conclusions given in the formatical that we have a spain and in different persons that in the mean it is about the my years the conclusions of the conclusions.

HINTS FOR THE SLEEPLESS,—Böward Everett Hale says: "Never go to bed in danger of being hungry. People are kept awake by hungry. People are kept awake by hungry. People are kept awake by hungry. Beople are kept awake by new decisione. Key codes which starts the whole system, deciline tea or whole starts the whole system, deciline tea or words of thing to bed. A void all makeomatics or intricate study of any kind in the last six hours. This is the stuff kind in the last six hours. This is the stuff while stuff is the stuff of any hungry our conscience clear. Remember that because the science of the six infinite you cannot do the whole of it is in any limited period of time, and therefore you may just as well leave off in one place fore you may just as well leave off in one place.

SMAKE HITES.—Just as quick as possible after being bitten by a snake, melt hog's lard and drink a teacoptul. Then take a white glass bottle and fill it with whisty, and hold it to the wound, when the green poison will exude into the whisky. Then apply fresh whisky, fapear the poison will study be removed. This is said to be an infallible curp for the bits on a rattleanake, Ohildren thus the bits of a rattleanake, Ohildren thus the bits of a rattleanake, Inhildren thus a case we should apply the whisky inwardly a case we should apply the whisky inwardly could avail as outwardly, and all that the patient could swallow.

FISH AS BRAIN TOOD.—Professor Atwood, in bin second article on 100ds in the June Century, devotes some pages in exploding and ridiculing devotes some pages in exploding and ridiculing fibe professor that mentals exertion consequently, fish is specially good brain, and that, on account of containing much phopporus. He denies that fish is peculiarly rich in phosphorus or blat there is any evidence that the brain or that there is any evidence that the brain or that the brain or that the present thought or that the proportion of phosphorus, or that there is any evidence that the brain or that the proportion of phosphorus, or that there is any evidence that the brain or that the proportion of phosphorus, or that the proportion of phosphorus, or that the proportion of phosphorus that or the proportion of proportion or the proportion of proportion or the proportion of phosphorus that or the proportion of proportion or the proportion of proportion or proportion or the proportion of proportion or the proportion or the proportion or the proportion of proportion or the proportion or the proportion or the proportion or the proportion of proportion or the proportion of the proportion or the proportion of the p

POISONING BY MUTMEG.—A case of poisoning by natine, Medical by natine, in which one autimed had been eaten hours, in which one autimed had been eaten him to become giddy, etupid, and very drowsy all next day. The narrowing properties of these seeds, and of others of the same natural order, do not appear to be generally known, and seem worthy of investigation.

"Mavajo.—Crosscut No. 2 from east vein, 250-600 feet, has been advanced seven feet. Drifts north and south on west lateral vein have been extended a total distance of 32 feet in high-grade ore. Town Treasure.—Water continues to retard work. Gangway, 160-1601 level, has been advanced to retard to retard the seven feet. The stranger in the face week. The stringer in the face holes of the seven feet during the week. The stringer in the face the seven feet during the week. The stringer in the face holes encouraging. Some good ore is being saved.

### Tuscarora District.

Mose District.

Work Resumed.—Esmeralda News, Aug. 20:
Work was resumed on the Monitesl mine, Mose employed, John Warner has two men at work on the Arrow mine. About 15 fons of ore has been extracted: The ore is considered to be of very good quality.

BEGINNING OPERATIONS.—Walker Lake Bulker Lake Bulker In, Aug. so. Harry Somerwille left Hawhorne on the first of this month to begin operations in Globe District, Mye county, Work bas already comparing the first of this month to begin operations in Globe first of this month to begin operations in Globe marked to the same case on a group of mines in which he is interested with R. Kelly and Dr. Laws. The mines are intuited about a miles from Luning, and balk a mile east of Luning and Downeyville stage toad a mile feet. A start has been sunk on one of these claims to a depth of 40 feet, showing the ledge to claims to a depth of 40 feet, showing the ledge to three miles, and on mines assigned from two to of oddlars as ton. The country is smooth and sleep free miling gold ores, some toeks showing contact the miling and assigned to the same case assigned from 12 for other than the mines. There is a large belt of timber within the mines. There is a large belt of timber within the operation for the carrier of the mines. There is a large belt of timber within the mines. There is a large belt of timber within the mines, and convenience and of these necessities making connected this disease the miling and reduction possible. No mining economical mining end reduction passing nears, all of whom freely declare assigned to the same of the country will soon witness a mining section. We have the country will soon witness a mining section.

Moss Distanced the sent of the same over the case in this section. yet been seen in this section.

### Globe District.

tions certainly go to show that it is valuable.

PROSPECTING.—Motwithstanding the many disadvantages prospectors are forced to contend with advantages prospectors are forced to contend with Jy prospected. With but few exceptions, have men in Hawthorne district, the hills are being thorough. By prospected, With but few exceptions, have men for the work on claims, in that district without taken from the worked a lot of ore or bave a quantity on the dump worked a lot of ore or bave a quantity on the dump worked a lot of ore or bave a quantity on the dump worked a lot of ore or bave a quantity on the dump worked a lot of ore or bave a quantity on the dump first work, the proceeds of which were about \$75, ore to Dayton to be worked, the returns from which or to Dayton to be worked, the returns from which or to Dayton to be secretained. He reaumed work on his mine yesteraday, and thinks when the dump of the proceeds of the ore will be greatly increased, that the great of the same class of the same class of the proceeds.

The Pamiroo.—Esmeralda News, Aug. so: On Ducaday morning Syl. Light, foreman of the Pam. Thursday morning Syl. Light, foreman of the Pam. Thursday morning Syl. Light, foreman of the Pam. Ducaday morning Syl. Light, foreman of the Ducaday of the commence the work of prospecting, to the mine to one of the buildings and didings a boardings and lodging ones, it is the intention of the company to remove one of the buildings now at the Lapanes and put it fore of the amilior ground. This mine, so far as worked, has proved a good property. As soon as worked, has proved a good property. As soon as former of the mine is put in good working shape the present force of miners will be increased. The owners of ince of the property leet confident that it is the best investing a miner in Hawhorne faithule, and the present indications are also and the present indications of the property leet on show that it its valuable.

PROSPECTING.—Motwithstanding, the many distinction of the present indications and the present indications.

SILVER HILL—Ermanda, Neur, Aug. 20: The SILVER HILL—Ermanda, Neur, Aug. 20: The Silver Hill mill, at Aurora, closed down leat Saturday Gor repairs. It will be started up again in a few days. The Silver Hill Mining Company has been days. The Silver Hill Mining Company has been days. The Silver Hill Mining Company has been days. It will enter being now employed. The mine, with plenty of ore in sight, will furnish sufficient ore to plenty of ore in sight, will furnish sufficient ore to the Mawaborne District.

## Notices of Recent Patents.

Among the patents recently obtained through Dewey & Co.'s SCIENTIFIC PRESS U. S. and Patent Agency, the following are

Dewby & Co.'s Scientific Press U. S. and Toreign Patent Agency, the following are workly of special mention:

HUMTING DECOY.—Wm. Ryan, S. F., Cal, No. 368,427. This decoy consists of a series of adjustable floats, have deep ing means for altering their size with relation to each other so as to accommodate them to carn other so as to accommodate them to accommodate them to each other so as to accommodate them to carning the bird chercon, and supporting it is means for experience for amporting at a supporting the float state of the series of the series is the preferable to enes, as decoys, and the object than the series of the object that it is preferable to enes, as decoys, and the object that and be appropriate and the object that it is preferable to enes, as decoys, and the object it is a self-operating one—that is to solve the tast of the traveler of the series of the series of the series of the series of the conveyence. The operation is accomplished the the traveler to all the terminal series of the series

Ban Buenaventura, Cal. No. 368,477. Dated Alog. 16, 1837. This invention belongs to that Alog. 16, 1837. This invention belongs to that clease of cheek-reins and hooks which enable the driver, unsided by any extra line or string in his hand, to cheek and uncheek his horse or his hand, to cheek and uncheek his provement upon horses at will by the driving-reins or lines alone.

The present invention is an improvement upon to him in patent Mo. 345,401 of July 13, 1886, to him in patent Mo. 345,401 of July 13, 1886, this improvement consists in the application of the standard or post beneath the sittling hook of the abant, which spring has a single spring in the standard or post beneath the abant of the following his or so the control of the hook of the finletum plus as the cast to act to hold the hook up or down as the case may be, hold the hook up or down as the case may be.

Vectum Derdeng and all the control of the finletum plus as the case may be.

Inventors on the Pacific Coast will find it greatly to their advantage to consult this old experienced, first-class Agency. We have able and trustworthy Associates and Agency ingtons and the capital oitse of the principal nations of the world. In connection with our editorial, to conficultific and Patent Law Library, and record of original cases in our office, we have other advantages far beyond those which can be offered home inventors by other agencies. The other advantages far beyond those which can be presente before the Office, and the frequent information of Patents already granted, for the purpose of determining the patentability of examination of Patents already granted, for the purpose of determining the patentability of inventions brought before us, enables us often to give advice which will save inventors the examination of Patents already granted, for the purpose of determining the patentability of inventions from the constitution of Patents and a propose of applying for Patents upon inventions which are not new. Circulars of advice sent free on receipt of postage, Address DEWEY & CO., Patent Agents, 552 Market St., S., F.

### (2220'00' FIVE HUNDRED AND FIFTY DOLLARS

The present improved form of the colebrated "Triumhh" Ore Concentrator possesses many advantages over any other style of Varners, Vanning Machines, or Concentrators, yet introduced to the notice of mining men. These advantages consist in the superior features which enter their construction, and facilitate their operation.

They are consistent between the superior features which she construction, insures their colities, durability, and perfect their construction in the best manner; their their construction is reduced, and occupy less mill room when operated. They are opportant in the construction is reduced, and occupy less mill room when the perfect their cost of transportation is reduced, and occupy less mill room when set up, an important improvement has recently been introduced into their construction, which consists of a Kityler Table. Place, and which takes the discharge from the feed and smalgem bowl. The improvement is in the reciprocal motion which is imparted to their takes the discharge from the feed and smalgem bowl. The improvement is in the reciprocated motion which is imparted to the feed and smalgem bowl. The improvement is in the reciprocal motion which is imparted to the feed and smalgem bowl. The improvement is in the reciprocal motion which is imparted the restiments the feed and smalgem bowl. The improvement is in the reciprocal motion is the feed and smalgem bowl. The improvement is in the reciprocal motion in the feed and smalgem bowl. The improvement is in the reciprocal motion is a factor of the officients and use of the efficiency and apprintly of this form of Concentrator, and we shall be pleased to send Circulars covering such letters of testimony, and, as well, directions for setting up and operating free pleased to send Circulars covering such letters of testimony, and, as well, directions for setting up and operating free such experiments and see respect to the efficiency and appropriately directions for setting up and operating tor any considerable order.

Precious Stones.—The value of the rough geme sold in 1886 was \$79.056. In addition, gold quartz was sold for specimens and for geme to the value of \$640,000. The value of this, when are is \$100.000.

Miscellaneous,

ting.

Infusorial Earth.—The production for the Juscorial Earth.—The production with a spot year amounted to 1200 abort tons with a spot First.—About 30,000 long tons, having a spot value of \$120,000, were used in pottery manufacture, besides a considerable amount for sandapare.

Buivesones,—The total value of the finished buivesones,—The total value of the finished buivesones was \$275,000. The increased use of roller-mills affected the French bubristones, more than the domestic stones.

Grandstones.—Total value \$2,500,000; proGernadum.—The production in the past few years has been quite steady; in 1886 it was 645 short tone, valued at \$116,190.

Nowcettiste.—The rough whetstones amount. odd to 1,160,000 pounds, valued at \$15,000. The value of the steady in 1896 it.

Abrastve Materials.

Bruckural Materials.

Building Stons.—Value estimated to be about the same as in 1885, \$10,000,000.

Brick and Tile.—Value \$38, 500,000; this value represents an increase of 10 per cent. over last greater than 10 per cent; there was some falling off in value during a part of the year.

The increase in production was enightly greater than 10 per cent; there was some falling off in value during a part of the year.

Linus.—The production is estimated at 42,-500,000 barrels, with an average value of 50 cents per barrel.

Sou, Mathematical pertland cents of \$3,097,-700 the was 4,350,000 barrels, along at \$3,097,-700 the was 4,350,000 barrels, and a \$3,000,000 the was 4,350,000 barrels, and a \$3,000,000 the same of the sam

years.

Petroleum.—The total production was 28,110,115 Barrels of 42 gallons each, of which the
Pennsylvania and New York faelds produced
25,798,000 barrels. The total value at an avergeo of 714 cents, the average value of the Penngylvania and New York petroleum, was \$20,028,457. The production chowed an increase
appearing and New York petroleum, was \$20,016,265,074 barrels over the production of 1885,
in cubic feet. It is estimated that the amount
of coal displaced by gas in 1886 was 6,353,000
of coal displaced by gas in 1885 the amount
of coal displaced by gas was 3,161,600 tons,
valued at \$4,854,200.

MOVEL MEATING DAILMAN ON MEATING MALLWAY OARRAGES.—An entirely new method of heating
trainway earliages from the engine is announced
to be tried on a Pennsylvania railway. The
principle to be adopted is similar to the airpresent as the similar to the order
to the brake system, and it is argued that
for the brake system, and it is argued that
for the brake system, and it is argued that
box of the engine. There is always plenty to
box of the engine. There is always plenty to
spare, and, in fact, large quantities are wasted.
The hot-sir method would cause no danger, because, if any break cocurred, there would do no
possible chance of free or explosion. Of course,
if this plan is adopted, all locomotives would
it this plan is adopted, all locomotives would
it out.

PETENDEMM WELLS IN TWO STATES,—Acconding to the certain seeinates, 53,000 wells have been a factor of the certain sees, 53,000 wells have been diffilled in Pennsylvania and Mew York alone diffilled in Pennsylvania and Mew York alone of see the cost of \$300.000,000. This represented a profit to \$500,000,000. This represented a profit to the producer of \$300,000,000. The see been as the count of oil exported is placed at 6,281,102,-301,823,200,000 bave been as a school of the producer of see the produced in machinery and drilling. This does not include the millions represented in the natural gas include the millions represented in the natural gas include the \$50,000,000 the produces, there are alone \$50,000,000 the millions represented in the natural gas inclusion in the natural gas plants in the natural gas plants in the rest of the producer.

THE FIRST USES OF MATURAL GAS.—Natural TRE TREY [72].

Eas was first made good use of in the year [82], when some enterprising citizens of Fredonia, Chantanqua county, M. Y., devised a method bed for utilizing, in a small way, the gas which in the noighborhood of the twom. A small well was bored in the the village to the depth of 27 feet, was bored in the way and the gas conducted through pipes to the paper of the paper of the gas conducted through pipes to the paper of the gas conducted through pipes to the paper of the gas conducted through pipes to the paper of the gas conducted through pipes to the paper of the gas conducted through pipes shore.

METAL WECKTIES,—Soaris and necklies of motal are a new German invention. Gold, plating are a new German invention, described, after the mossic style, upon a metal ground, prepared by means of powerful presses, and finally elongated by rolling into long after or yellow, red, green, white, gray and black, and the scaris, being indestructible, are considered of practical value.

REFRESHING DRINK.—Pour one quark of boiling water on 14 pounds of sugar, one-half pint of notasses, two ounces of stratifications coid, bottle and cork tight and keep in a cool appace. When wanted to use, take three teatspace. When wanted to use, take three to a sponfuls of this syrup in three-fourths of the syrup in three-fourths of a teatumbler of water, put in one-fourth of a teatumbler of water, put in one-fourth of a teatumbler of sugar and trink immediately.

A COMBINATION MAIL AND SCREW.—An Eastern inventor has devised a new screw—anyline is said to beat balf nail, half screw—which is said to beat two blows of the hammer, two turns of the screwdriver, and it is in. Its holding power in white pine is said to be 332 pounds against 298 pounds, the holding power of the present screw.

The Oireovertion of the Blood through the lines was first announced to the world by Mitches Servetus, a French physician, in 1553. Cisalpinus published as account of the general oirculation through the system in 1569; but his ideas were somewhat confused. It was not fully understood, however, until Harvey took it in hand in 1628.

Calico was first imported into England by the East India Company in 1631. Calico print-ing and the Dutch loom engine were first intro-duced into England in 1676—45 years later.

POLISHED GRANITE is much more durable than bammered granife. Polishing the stone prevents the lodging of moisture and foreign particles on its surface.

Women as Inventors,—QD to Dec. 1s 1886, there had been granted to women by th United States, letters patent for 1935 inven sions.

The First Street Railway in America was completed in New York City in 1832.

PACIFIC: PAVING CO., Aug. "31st. Object, to conduct a general paving business, bore wells for conduct a general paving business, bore wells for Jews and J. T. Wilson.

Jes. H. Swift, J. Rice, J. L. Thurber, F. N. Gowyol, Directors—James H. Swift, J. Rice, J. L. Thurber, F. N. Wilson.

37st. Capital stock \$50,000. Directors—James H. Swift, J. Rice, J. L. Thurber, F. N. Wewval and J. T. Wilson.

ALVA UDELL Co., Aug. 31st. Object, to construct for transportation by rail or atsemer and deal in real estate. Capital stock \$700.000. Directors—I, T. Rogers, Alva Udell, John Anderson, Bernard Ettinger and J. S. Jones.

### Mining Share Market.

There is not much to say concerning mining stocks. Prices are low and the transactions are textual stocks are there is comparatively little interest in stocks by the stock of the subject the Virginia Lawropysts just now. On this subject the Virginia Lawropysts pageks as follows: In view of the real estate boom now in progress in all parts of thousands of dollars and the renamed of the real estate boom to ports of tens and hundreds of thousands of dollars under in every hillsge and hamiet 'ijust as easy as rolling off a log," it is useless to tell the people that notice in every village, and hamiet 'ijust as easy as rolling off a log," it is useless to tell the people that rolling off a log," it is useless to tell the people that notices from end to end of the location of event. The Comstock is far away across the mountered at almost any we bere in the nountered at stimost state and boom is infasted, while all over Galifornis the land boom is infasted. While all over Galifornis the land boom is infasted, while all over Galifornis the sort over the mountered are mills, and such mills as have never before been airs in a month or two will speak for itself. We already have the ore, and we will very soon have the one in the country.

Seen in the country.

### The New Railway Fares.

We mentioned last week the reduction in passenger tares over the lines of the Southern Pacific System. The following is a fuller state-

Pacific System. The following is a futier state-ment of changes to take place soon:

The rates from San Francisco to Geden will
be \$35 unlimited, \$30 limited and \$25 third-class. From San Francisco to El Haso the
rates will be \$40 unlimited, \$35 limited and \$25
third-class. From San Francisco to Tucson the
frate-class. In Arizons the reduction will be
generally from \$4 to 5 cents a mile.

Following is a list of the principal reductions
determined upon.

Following is a list of the principal reductions
determined upon.

### MECHANIGAL PROGRESS.

Steel-Cut Nails vs. Wire Nails.

The rapidity with Walls Vs. Wire Mails, Weeken Sates, and general use, especially in the active the very street states and the very street states, and the very states are states and the very street states, and the very states are states and the very state states and the very states are very states and the very state of the very states and states, and the tenancions of the discovery states and some very states of the very states and some very states and very state

An Unexpected Revelation.

While this matter was under consideration, and to more that matter as under consideration, and to more tully illustrate the fierce compettion now being carried on between cut nails and wire nails, the Ivon Age publishes an account of a test recently made by the Bellaire, onlio. The company procured from the manufacturer a keg each of the Itoliowing sizes of wire nails: 20d., 10d., and Ad. The number to these wire nails in a pound as advertised, and as found by actual count, and also the number to the pound of the count, and also the number to the pound of the count, and also the number to the pound of the count, and also the number to the pound of the count, and also the number to the pound of the count, and also the number to the pound of the count, and also the number to the pound of the count, and also the number to the pound of the count, and also the number to the pound of the count, and also the number to the pound of the count, and also the number to the pound of the count, and also the number to the pound of the count, and also the number to the pound of the count, and also the number to the pound of the count, and also the number to the pound of the count, and also the number to the pound of the count, and also the number to the pound of the count, and also the number to the pound of the count, and also the number to number t

\$50 \$00 \$50 432

The plan of testing was to drive the nail into a dry pine searthing to within a quarter of an inch of the head and hang weighte on the head nutil the nail pulled out. The following is the bodding power of anils thus tested:

It will be seen from this table that one pound of cut nails has a holding power as compared with one pound of when nails as follows:

I h 2004. Out wails equals 1.40 h. Wire Malla,
I h 2004. Out wails equals 1.40 h. Wire Malla,
I h 2004. Out wails equals 1.40 h. Wire Malla,
I h 2004. Out wails equals 1.40 h. Wire Malla,
I h 2004. Out wails equals 1.40 h. Wire Malla,
I h 304. I h

It will be interesting to see what answer the wire-neal manufacturers will make to this statement, which is on its face a very strong argument in favor of the cut nail, both as to quantity per pound (difference in price considered), and as to sotual holding power.

TREES, ETC., GROWING UPON A GLACIER.—A curious geological phenomenon exists in the vicinity of Behring's strait. At Elephant point, Kotzbue sound, a ridge two miles wide and S50 feet high seems to be a vast mass of ice, thinly this soil birches, alders and berry-bearing plants grow luxuriantly, with the stratm of perpetral ice as the underlying rock within less perpetral ice as the underlying rock within less than a foot from their rocks. THE STORES OF THE PYERMIDS.—A personal inspection of the pyramids of Egypt made by a quarty-owner, who spent some time recently on the Wile, has led him to the conclusion that the better builders than those of the present day. He states that there are blooks of stone in the pyramids which weigh three or four times as these that there are blooks of stone in the pyramids which weigh three or four times as much as the obelisk on the Thames embankment. He saw a stone whose estimated weight pramids ounted human labor lightly. They pramids ounted human labor lightly. They has done by pyramids ounted human labor lightly. They premids ounted most of their work was 880 tone, but then the pyramids 30 feet in length which fit so over the surface without discovering the break olosely together that a penkulic may be run over the surface without discovering the break it will make two surfaces 30 feet in length which will meet together in unison as these it will make two surfaces 30 feet in length which will meet together in unison as these thous will meet together in unison as these their will meet together in unison as these thous were randed to sech other.

It is supposed that they were rubbed backward and forward that they were rubbed backward and forward the case of other untail the surfaces were assimilated to each other.

USEFUL INFORMATION,

Ir you are tall, light of weight and narrow of cheek, your chances of dying of consumption are favorable. Live outdoors all you can and take care of your health.

Our Bodies are the instruments of our souls.

Therefore it is the part of wisdom to revenence and respect the body as the notify firm and of the mind. Treat it well, and with firm and geatle kindness. Cheok its waywardness; prick its dullness, and shame its self-indulgence. The prick its dullness, and shame its self-indulgence exercises as your natural temperament and confertution require, and do not mistake violence for exercises, neither the residence out for yourself the health of a man. Find out for yourself white it is often the interest of exercise, neither the health of a man. Find out for yourself white it is often the marker of exercise, your own way. In the matter of exercise, manch as you can get it in often well ways—not taking as much as you can get, but as little as an assument the purpose, and avoid that physical swears the purpose, and avoid that physical weathing the degrades the mind.—H.

The proposition to kill fever germs by burning sulphur in the open air may seem impractive sulphur in the open air may seem impractly freat enough to induce a trial under favor favor able conditions. The smoke of large cities and the campfires of an army are considered to act for conditions of an army are considered to act the campfires of an army are considered to act officients.

reavy art at night, and falls again as to refery the very art at night, and its the very art at night, and its recover and article united.

It is known that no malarial fevers exist in the region of sulpiur works.

The Abyssinians, when preparing to hunt the delephant in malarious districts, thoroughly lumigate themselves with sulpiur. Sulpiurous cold has been adone adopted by the Health Board of the General Government as the districts that to be used in case of an invasion by the cholera to be used in case of an invasion by the cholera is local. It has been the were simple and strongly it would seem to be a very simple and elective way to tail the fever germa by burning authory just at nightfall. Sulpinur is so very in experiment.

A few years since the writer was met with this should not but a very few from all selections as and the with the strongly of the strongly of the word of the sulpinur burned in the building made it habitance in the sulpinur in the constraint of the sulpinur in the constraint of the sulpinur in the proposition to kill fever germs by burning inc sulpinur in the proposition to kill fever germs by burning the page at the constraints in the constraints.

a self-dividing langus, which, on entering into the system, obsured the blood after the manner of a poison. In 1879 Prof. Tommasi Crudel full observed when in an article is fully confirmed the stove view in an article, as Kome. He named the germ bacillus and went so far in his experiments as to induce fever in individuals by exposing the germs, and went so far in his experiments as to induce fever in individuals by exposing the germ in their sleeping-rooms.

It is believed that germ rises on the beavy air at night, and falls again at or after the suries.

LUBRICATORS. A.—Sooted pamphlet on Judit-cators states that a first-class oil should stand exposure to a temperature of boiling water, in a water path of six hours, without showing say appreciable loss by evaporations, its flashing point should not be below 300°, and for cylin-der oils, not less than 500°. ADVERTISING ALWAYS PAYS.—It is a fact that no one who has advertised liberally and that no one who has advertised liberally and the best-spent money he put into his business. As a horse was never made fat by a single bushel of oats, so a single advertisement is never a perfect effect of the benefits of advertisement is there are perfect effects of the benefits of advertisement.

COPPER.-PLATED sheets of steel are made by Mr. P. H. Luniman of Pittsburg, which are restrated by him as better for many purposes than solid sheet copper. The sheets are made of decarbomized steel rolled to the proper thickness, electro-plated with copper on both sides and tinned on one side.

To CLEAN WOOLEN UNDERWEAR.—Put them at once into cold water for a day or more; then when soap is used it never should be rubbed upon the goods, but dissolved in water, and in the goods, but dissolved in water. Adding a little water of ammonia saves the use of much little water of ammonia saves the use of much goods should not all directions, goods should be stretched in warm water, dried and again rinsed in warm water, dried and again stretched, it is a custom with some to use a forest over which to estretch the garments in drying.

Domesticating Pour Littes,—There are few flowers more admired and sought after by ladies than the white, fregrant pond lilly. Experient has shown that it can be snoosesfully domesticated, or, in other words, can be coosesfully asked. All that is necessary is to obtain a large tub—for want of something better a barwed in two may be used, in which is large tub—for want of something better a barwed in two may be used, in which is some of the roots of the lilly and bury them in the mud, filling the tub with water. Procure some of the roots of the lilly and bury them in the placed upon a lawn are very beautiful when there is a bloom, They must be moved to a cellar during uniter.

SALE.—Pelmont Cuoire, Sept. 22. J. O. F. Wilke informs as the is negotiating with Mew Wilke informs as the ties as easy of the seale of the Se. George mine situated in Sea Antonio district, Mye county. This unite was formerly known as the General Lee. Mr. Wilke says that a shalt has been sunk on this property, at the bottom of which the ledge is from four ciny effect in width. This ledge carries gold and silver one which averages about 500 to the ton. The ore is strength in start for three forms with the same arrange his affairs in San Antonio, for the purpose of completing the sale.

San Antonio District.

CHONDAGA.—Picobe Mecord, Sept. 3: The Onondage mine is still improving. In the bottom of the wines countered, and the wines targe theorys of ore were encountered, severaging one to two tons each. The strike was unsequenced to two tons each. The strike was unsequenced to two tons each in the coupeny and left to one side, the interestion of the company and left to one side, the interestion of the wince to being to tun a drift from the bottom of the constructs assert in through the present of the wines to be the present of the wines of the mine are indefatigable workers, the wholes drop on to a bonance ere long, and will, we hope, drop on to a bonance ere long.

continues with unabated vigor; the usual amount of ore is being sent to the mill, which is kept constant-ore is being sent to the mill, which is kept constant-ore is and sold and as at a basit is being sunk. The Silver Thread, and an air abalt is being sunk. The and other property of this great company are being and other property of this great company are being and other property of this great company are being and other property of the great company are being theorem and other property at the old workings, and there and other buildings at the old workings, and there is a busy hum of activity on workings, and there is a busy hum of activity on the control of the property is being the current and the control of the c

TWELVE THOUSAND DOLLARS,—Bellevue Hevrald, Sept. 3: The Casie City mine, Slaughler-house guich, not over two miles from Bellevue, and owned by James and Wm. McWade, was sold yesterday to the Granite Monntsin M., Co. of Montana for

George Taylor has been beer the past few months in the interest of an Eastern company, organized by work, Aug. 30: work the beds of More, Elk, Grimes and Granite the creeks. If the right of way bill passes Congress as the coming session, work will begin next sesson. This will be one of the largest mining enterprises in Idaho, and will raped that the expenditures accessary to consider and will raped that the expenditures accessary to work under full headway, constitute secusions, will be cone of the largest mining to expenditure secessary to work under full large and to the fune to expenditure secessary to work under full headway, constitut secrification work under full large and show the full work under full large and show the full work under full sand sover. There work under to get fall sufficient to work the work under full sand sover. The full man and the full sand sover the full full proposed to the full full worked in early days are millions, and show full as the best of the ground was not once and Elk creeks, is onstituted the full full worked, and such dass to more, and the full sand sher working two and three the full full worked. A great would now be considered the high prices of those days making it unprofitable to work fast more once, and then only half worked. A bedrock flume once, and then only half worked. A bedrock flume once, and then only half worked, and much of it is found as not once, and then only half worked. A bedrock flume once, and then only half worked been adduct rights here. Everything may be the deem and the question against but here after and after working two and three there and sher the passage of the ball, will have been agenc privileges in regard to dump that bares deem only half worked. A bedrock flume after and after the passage of the ball, will have the been agenc privileges in regard to dump that bares deem of the passage of the ball, will have the been agenc privileges in regard to dump that bares always.

Twenty Private the regard to dump that bare always as anne privile

COLORADO.

HARSHAW.—Recent advices from the Patagonias report mining matters in Harshaw and Washington from a price as prices, and chloriders wear being made to the ameters, and chloriders wear many lees.

BISBER.—The Copper Queen smelters shut down the first of the week on account of bad roads and lack of coke, but started up again on Friday with two stacks. This is one of the best copper properities in the world, and keeps two years' supply of one constantly in sight.

MARSHAW.—Becent addiese from the Patsennise

TRUE BLUE,—A rich strike is reported in the ne Blue, owned by A. H. Stebbins.

Olastely,

OMEGO.—The main shaft is down 100 feet, where a station is being cut out, in opening which a vein a station is being cut out, in opening which a vein station is being cut out, in opening which a vein MANHLE.—Bumor has it that the lessees of this property her got of 5500 per week per mau.

MANHLOWER.—The lessees of this property have got into a good body of rich ore, and are making it pay.

every hand.

OLD GUARD.—Work on this property is being every hand.

OLD GUARD.—Work on this property is being adjorously procedured. Three shifts are eaglested in white the receipt of the to-stamp mill which is defined to the contract of the co-stamp mill which is warrant the erection of the to-stamp mill which is contract the certain of the to-stamp mill which is contract or the completion of the different buildings by the tast of October, and it is believed that by Notice For the completion of the different buildings by the tast of October, and it is believed that by Notice For the completion of the different buildings were not the completion of the production of buildings by Notice For the completion of the production of building to the moder way.

LUCKY CUSS.—It has long been known that a large body of good grade ore exists in this, one of large body of good grade ore exists in this, one of the mobilion be well the most of the Tombstone Milliam of the cauthor to admind the stamp of the cauthor of the monitoring the most works will be effected, the work to be windered distiller.

# WATER CANON.—Sonoma Bullion, Sept. 7: The Georgia Bell is pushing work and increasing in the output which is being shipped to Scoorro for reduction, The Three bowman is increased in the special particles and quantity of ore too rapid to comment upon. The Jace bowman is increased in the statement upon. The sace bowman is increased comment upon. The sace bowman is increased comment upon. The sace bowman is increased comment upon. The sace upor workings but comment upon. The sace upor workings but more galena and an against a fall of the character of the ore is the same as the upper workings but more galena and an entitly different lead. A new more galena and an entitly different lead. A new morth which will semines to persistion sometime exit company will commence operation sometime exit to differ the compinues the morth which will simulate business in camp to a secence of sculve work. There task of the resumption of work in the Meritti mine. A large vein of noth in the Meritti mine. A large vein of production of Socorro county will be greater this per result in the Meritti mine. A large with the Sat. A large body of sand carbonates had native silver thas made its appearance in the Star of production of Socorro county will be greater this per result in the same interest of the same server seen. It is the chart of the same of the carbonates in the Star of the sawas ever seen. It is the chart of the say gold brick as was ever seen. It exhibited as pretty a gold brick as was ever seen. It exhibited as pretty a gold brick as was ever seen. It was the carapings from the place of the search seen. It NEM MEXICO.

reteke. The troot clade mine from whiten one was cannot series and being and shapped to Buttle for fluxing purposes, is not being worked now, as the partners cannot series.

Juvide District.—Buttle Inter-Mountain, Sept. 2: Augard Mueller, who is interested in the Divide District in the United Series.

Line at work, and are running two tunnels to almost every day. The Apex Con, Mining Co. has almost every day. The Apex Con, Mining Co. has almost every day. The Apex Con, Mining Co. has almost every day. The Apex Con, Mining Co. has almost every day. The Apex Con, Mining Co. has almost every day. The Apex Con, Mining Co. has almost every day. The Apex Con, Mining Co. has almost every day. The series of a bond for stoon enen at a strike the lead on the Franklutt, and has an advantage of the force every coon. Mining the series of a bond for stoon one of the Constitution has now been interested there are confident that it will soon come interested there are confident that it will soon come interested there are confident that it will soon come interested there are confident that it will soon come of the force of LEADVILLE'S DEVELOPRIENT.—Denver Tribune-well-known mining editor of Leadville, was in the coll Leadville, was in the coll Leadville, was in the coll of Leadville, was in the coll of Leadville, was in the coll collection. Several good before the miner in that region. Several good strikes have falsely been made, and new ground is strikes have lately been made, and new ground is surface have lately been made, and new ground is surface have lately been made, and new ground is more than suspected. It is evident that the tent of ore-besting country is much larger than ease strike in the groupsect or be winch larger than based on the most sangine eastlet relit of ore-besting country is much larger than even the most sangine eastlet be much larger than even the most larger to be surfaced out the confidence of iron, which had been supposed to be well nigh worked out. Mr. Clint koudebush, who has been supposed to be well nigh worked out the prosperty under lease, and shipping considerable quantities of iron, which had been morking the order ton, has struck some fine one; and of the Lee, in which had some the core; one of the Lee, in which the same amender the one, and of the Lee, in which the same one the one; and veloped country. Leadville will crowd the \$15.000, which had been supposed to be world. And there is no one; and veloped country. Leadville will crowd the \$15.000 which had been supposed to the sadding the north end had been supposed to the sample one; and other mining camp in the sonial margin of production this year, which will not be make the condition improve in the considerable mining in the sonial margin in the past. It bids fair to become more of a world's wonder than it has been.

ANACONDA,—Review, Sept. 1: News in mining cucles about Anaconda, the pass month, base been decles about Anaconda, the pass month, base been cucles about Anaconda, the pass month, base been west the formation of the Montans Hire Briefs and Fire Clay Co. The company is now working a shipment of lour tons to the Boston and Montans and State made as a larger scale, a small force of men the list mice, and alsa week made a shipment of lour tons to the Boston and Montans and State scale, and lour tons to the Boston and Montans to the district west of Anaconda was a larger scale, should be district west of Anaconda was made last seture, by William Dix and Chris Keenan, in their the district west of Anaconda, sac as larger scale, about 15 miles west of Anaconda, and it is located to mile cable road. At a depth of 16 becet they struck a chimney of carbonates. They brought a seasy \$200 the vein to Anaconda, and it from the Cable road. At a depth of 16 becet they struck a chimney of carbonates on Foster sembles the trapper carbonates and seven miles from the Cable road. At a depth of 16 becet they struck a chimney of the vein to Anaconda, and it dient from the Cable road. At a depth of 16 becet they seem the Cable road. At a depth of 16 becet they seem in aliver. The Constant of the vein to Anaconda, and it staken this specimen of the vein to Anaconda, and it discussed from Mooces creek, and will now go to work developing their valuable properties on Foster oreek. The Iron Clad mine from which ore was a faken this spring and shipped to Butte for wat purposes, is not being worked now, as the partners are spring a spring and shipped to Butte for fluxing purposes, is not being worked now, as the partners and the partners are supplied to Butte for interested in the Divide.

ANARE CREEK DISTRUCT.—Park Kecord, Sept. 3: Stacke Creek Distruct.—Park Kecord, Sept. 3: Stacke Creek distruct and all that part of the great mineral-beating zone couth and were of the Ontario on the eve of making at a size period and on a small distruct while begun at a size period and on a small distruct while begun at a size period and on a small distruct while begun at a size period and on a small distruct while begun at a size period and on a small carring record. The developments in that intantile and the capitalists alike, Everything that nature in the veins will equal any in camp, as could developing the mines; and wood, water, and heavy times; and wood, water, second dever, and the population of the wood water and classing of considerable activity, and the form the pick will have a record established as a leading district in order. The Revision of the week and the former in order, at the former and the considerable and the Revelley and after the pick water and the former, and a turnel recently and are being developed by turnel by Bower, Axtell. The Plymouth, just abower and and peace well in ore, a total of story Bay, as a bline of story turnel by tur

Morra.—Copies of U. S. and Foveign patents furnished by Iewey & Co., in the shortest are consistent of the converse time possible (by mail or felegraphic order). Amorican and Foreign patents of obtained, and general patent business for Facilia Coa it inventors transacted with portect security, at reasonable rates, and in the shortest possible time.

### Notices of Recent Patents.

Motiogs of Recent Patents.

Mowey & Co,'s Sourwrive Presss U. S. and Worthy of special mention:

Foreign Patent Agency, the following sre worthy of special mention:

HAY RAKE.—John H. Johnson, Traver, Thiare Co. No. 369,060. Dated Aug. 30

1887. This is a new improvement in hay rakes, the object of which is to hold the operating the rake down upon the ground, no matter how the travel of the operating the rake down upon the ground, no matter how the travel of the operating the rake down upon the ground, no matter how the seavy the load may be.

Sewer Gas-Traps.—John Tilton, S. F. No. 369,1987. This in
Betwer Gas-Traps.—John Tilton, S. F. No. 369,1989. Dated Aug. 30

Reserve the load may be.

No. 366,3793. Dated Aug. 23, 1887. This in
between sinks on topopera incommencation the second of the contion relates to an improved gene-trap which they communicate. It consists of a cap or floating properly guided within a chamber and closing, appring, said doat being proverly where water with which they communicate. It consists of a cap or floating, by which it is beolyancy or the action of a spring, said doat being proverly when the consists of a cap or floating.

Numal Stock.—D. H. Kathan, Davisville, Day which it has being proverly said doat being browned as the object of the sections, with united and the desired.

Yolo combety, No. 369,1661, Dated Aug. 3, 1887.

Yolo combety, No. 369,1661, Dated Aug. 3, 1887.

Young it may be extended sither longituding tone them. It consists of a base or support formed in sections, with united and the day of the consulty in the bring time of a series of posts fixed on the movable sections, between which animals of difficult in any be extended sections. When the same hay be lead with his bring to securing the sections which are any or the sections, when the same and a complexity of the sections which are sections. When the sections we have the section when the sections were the sections where the sections were the sections where the sections were success at some to the sections wh

OR VANNING MACHINE, CONCENTRATOR OBE **THE FRUE** 

# PRICE FIVE HUNDRED AND FIFTY DOLLARS

The present improved form of the colebrated "Triumfr" Ore Concentrator possesses many advantages over any other style of Vanners, Vanning Machines, or Concentrators, yet introduced to the notice of mining men. These advantages consist in the superior features which enter into their construction, and facilitate their operation.

They are constructed in the beat manner; their frames being of iron, insures their solidity, durability, and perfect traces being of iron, insures their solidity, durability, and perfect durie less freight space in boxes, by which their cost of transportation is reduced, and occupy less mill room when set up.

An important improvement has recently been introduced and smalgam bowl. The improvement is in the reciprosal motion which is incoment has recently been introduced and smalgam bowl. The improvement is in the reciprosal motion which is incoment as discharge from the feed and smalgam bowl. The improvement is in the reciprosal motion which is imparted to this table by the longitudinal motion of the shaking frame to which the table is at a cashed. We have at band many testimonials, from well-known Superintendents of mines in different mining districts of the United States, hearing evidence of the efficiency and superiority of this form of Concentrator, and we shall be pleased to send Ofronlars covering such letters of testimony, and, as well, directions for setting up and operating frame for granting to quote special prices for any considerable order.

Meaning value and sterested by the officiency and superiority of this form of Concentrator, and we shall be pleased to send Ofronlars covering such letters of testimony, and, as well, directions for setting up and operating the many periods and any are ready to quote special prices for any considerable order.

lished the Evening News. As a journalist, he This pressure can be increased very rapidly, a pioneer Oaklander, was recently the owner. The mines of Cherry Creek, Nevada, are showing signs of improvement, ually decreased as the pressure increases in the train pipes and brake cylinders.

THE LATE GOVERNOR BARTLETT

HEATING PIEES.—Pipes for conveying hot steam for domestic and other purposes are coming into quite general use in large cities. The Boston Heating Company expect to lay 13,000 feet, or over two and one-third miles, of four and six inch pipes before November 1, The testal plant will oost about \$200,000.

THE STEEL MARKET.—America now rules the prices of steel throughout the world. Kublow's says: North America gives the one in prices is always in proportion with the increase of the large demand of that country. The demand from other countries, which is exclusively for steel rails, keeps, as a rule, very much on the same level.

An Alleger Improved Evelue.—Sir I. Lowthian Bell, in a speech recently delivered, reports that the Hon. G. A. Parsons of the firm of Clark, Chapman & Parsons of Stackscheeded in constructing an exceeding it is said, with a very moderate consumption of coal, makes 10,000 revolutions in a minute, and can work up to the astounding speed of 30,000 revolutions in a minute, and revolutions.

THE CANTILEVER BRIDGE NOT MEW.—Mr. Cawley, formerly professor of engineering in Japan, caused exceptional interest by reminding the members of the British Engineering Lustitution at their last meeting that the cantitation at their last meeting that the cantitation at their last meeting that the tapanese that which had been adopted by the Japanese bridge builders for centuries back. At Vikko bridge builders for centuries back. At Vikko been built for 200 years, although it was called a temporary bridge.

LUBRICATING ORE.—The chemical laboratories connected with our leading railroads are
devoting close attention to the character of lafered to railroads having laboratories is improving. A first-class laboratories is improveing. A first-class laboratories was possible loss
arx hours without showing may appreciable loss
from evaporation; its fashing point should not
be below 300°, and it should not congest at
zoro. For cylinder oil the flashing point should
solve without should not be below 300°.

Great improvement in Ritle Manupactures.—Great improvement has recently been made in the manufacture of rifles; 120 barrels can now be rolled in an hour by one machine. They are straightened cold and bored with corresponding speed, and even the rifling is now done automatically, so that one man tending strates per day. With the old rifling machine 20 barrels per day. With the old rifling machine 20 barrels was about the old rifling machine 30 barrels was about the ching a bell to easil the rifling is completed ring a bell to easil the attention of the workman. One man is thus the attention of the workman, one man is thus a balled and when the rifling is completed ring a bell to easil the attention of the workman.

LIGUID FUEL.—A series of tests of the Baku oils for fine and patronage of the Baku oils for fining marine steam holiers is about to be made by Mr. H. H. Thealte, of Sheffield, Effectively, of Sheffield, The oils—crosote and cetaki from be made on the consote and cetaki from the Thwaite yet seek resulting from the Thwaite yet seek resulting from the Thwaite space. # PNEUMATIC PULVERIZER

# POWERFUL OPPOSING CURRENTS

Of dry unper-heated steam, so arranged that they continuously charge themselves with crushed or granulated material, and it could be considered to the steam our renated to minerals are desired grainst each other with and purposed, through which principles of the material continuously make the material continuous and surpoyed, through which every minute particle particle of or our materials forces than to become our manual and ores containing rately Gold. Then light weigh and simplicity of cometrories of the pulseriest, the extremely small and inexpensive wearing parts, are the WONDE and SURPHISE of all who witness is operated. The Ompany is prepared to furnish complete plants for pulverising and SURPHISE of all who witness its operation. The Company is prepared to furnish complete plants for pulverising

10 TO 200 TONS PER DAY,

Including a Sectional Steam Boiler supplying all the power required.

# Our Heroes of To-day.

Delivered by the Author at the Opening Exercises of the Exhibition of the Mechanics' Fair, San Francisco, at Grand Opera House Sept. 1, 1837.

With high lace held to her ultimate star, Whis with bigh lace held to her unutains of gold, Whis with the wonders are, This sew-built world, where the wonders are, She has built new ways from the ways of old,

Her builders of worlds are workers with hands; Her true world-builders are builders of these, The engines, the plows; writing poems in sands Of gold in our golden Hesperides.

A song for these soldiers of peace; and again A-song for the narvels these men blue wrought, Our gleamy anows, and their bredes of grain If untolled as a seroll could record them not. "Preckon these builders as gods among men; I count them orestors, creators who knew The thrill of dominion, of conquest, as when God set His stars spiming their spaces of blue.

A song for the groove, and a song for the wheel, And as rearby song for the runbling ear; But away with the pomp of the soldier's steel, And away forever with the trade of war.

The hero of Time is the hero of thought; ""
The hero who loves at the hero of peace;
And braver his battles than ever were fought,
From Shijoh back to the battles of Greece.

\*IIA

The hero of beroes is the engineer;
The hero of heroes is the chave man't sear.
Whose only tear is the brave man't sear.
Whose only tear is the brave man't sear.

The h-ro we love in this land, teeday

I, the fore who lightens some festow-marks load—

I, the fore who lightens some festom inghway;

Who makes of the desert some blossems on the dead

The Stanfords, the Sutros and the Hallidies, And an hundred more with their names untold-They are kinglier far in their uncrowned ways They are kings with their crowns of gold.

Then huszah! for the land of the golden downs, for the tritten land of the silver horn; Het hertoes have built her a thousand towns, But mever destroyed her one blade of corn.

Oakland, Cal., Aug. 30. 1887.

### Notices of Recent Patents.

orthy of special mention: Among the patents recently obtained through bowey & Co.'s Scientific Press U. B. and oreign Patent Agency, the following are

EVEL.-George Micolescu, S. F. No. 369, COMBINED TRY SQUARE, SURFACE OAGE AND

Сомвико Нелоев лио Тивлянев Соор-707. Dated Sept. 6, 1887. This mechanic's cool consists of a combination of try-square, our fetores gage, level and plumb in one device. It forms a convenient and bandy tool for a sooren and is suitable for a great many purscess.

OOMEIVED HEADER AND THEASHER COUP-LUG.—Daniel Best, San Leandro. No. 369,. 198. Dated Sept. 6, 1887. The coupling is in-sended to unite the heading and threshing por-sion of a combined harvesting apparatus. It omsists of a triangular tramework hinged to the desping or cutting machine, and having the hinged to the threshing portion of the apparatus hinged to the front side of the triangular trame. A very strong and flexible union is formed be-tween the two parts.

Combined to a superscript of the triangular trame.

Сомвіикр Рісом для Векрек. —В. І., Рагка, гевпо, Ио. 369, 409. Dated Sept., 6, 1887.

This combined apparatus is one by which the found may be properly prepared and the seed from a stone operation. It consusts of a gang from a stone operation. It consusts of a gang how at the seed from the rectangular side to the ravel while the plows are supported from the liagonal beam, the whole traveling upon wheels which allow the plow to be adjusted, and in ombination therewith of a seeding apparatus ombination therewith of a seeding apparatus on himston therewith of a seeding apparatus of the plow and a seeding apparatus of the property of the pr

156. Dated Sept. 6, 1887. This combination Wheel, SEKERATOR.—Henry Olay Holloway, Jilroy. No. 369,405. Dated Sept. 6, 1887.
The object of this invention is to describe a generator of simple construction, portable, so that the may be readily moved from place to place, and adapted to make steam rapidly. In this defence to make steam trapidly. In this defence to make the continue to the free countries of merchoes, thus obtaining the advantages of both systems, and extended a steam of the settion of the free cutting the free cutting the free cutting of the make in thich the setting of the defence the steam of the countries. The box above in which the steam is formed.
